

Remote Noise Monitoring

Noise generated by construction, mining and energy development sites can create concerns for established housing and business communities.

The Whites Mini Noise Monitoring System allows OZA Inspections Ltd certified seismic technician experts to remotely monitor and record data. The results can help address housing and business communities noise issues, show relative change and establish compliance ordinance criteria for existing or new permitting process procedures. Remote Noise Monitoring System allows you to get data to project personnel without requiring them to spend hours and days in the field, saving clients operational time and resources.
