Subject: Ang. Magic Info

Hi Dan,

I hope everything is fine with you and your family. It is spring in Ronneby and 16 degrees C and the sun is shining so it is wonderful weather.
I will try to answer your questions.

Consumption

When we blast two wings (carbon fibre) we consumption 2000 lb wheat starch type VII and now with Magic type VIII we consumption 500 lb.

Productivity

The stripping rate is 30% faster with Magic than wheat starch.

Material

We blast aluminum clad and the thickness is between 1-3 mm, Titanium and Stainless steel.
The type of composites we are blasting is carbon fibre and small particulars fibreglass.
