

## **BASIC MAINTENANCE: SOAP VENDING MACHINES**

*Keeping each component of your soap vending machine clean from dirt, wax, ink and soap powder is the key to providing years of trouble-free service.*

### **Plastic Coin Drops**

Soak in warm sudsy water, checking the coin path for dirt buildup. Scrub the coin drop with an old toothbrush.

### **Metal Coin Drops**

Wipe down with a hot damp cloth, then scrub any heavy buildup with an old toothbrush.

### **Coin Slides**

Wipe with a clean cloth. Use a dry silicone spray to smooth the slide movement. Do not use any type of oil or spray on plastic or metal coin boxes, as oils will attract dirt and dust.

### **Machine Maintenance**

Powder buildup in the soap column, soap platform, vend mechanism or delivery slide can cause problems. Wipe down all areas in contact with boxes of soap with a hot damp cloth and allow them to dry. Do this once a week or whenever you refill the machine. Once a month, coat these areas with a thin layer of car wax to help the boxes travel smoothly.
