

## **Battery Maintenance**

Here is a sure fire method to keep those battery terminals clean if you have a battery in your Model T and have noticed that the terminals are showing some corrosion. Clean the terminals completely with water and baking soda. Let the terminals dry thoroughly and then take corn syrup and a paintbrush and simply paint the terminals with the syrup. It dries in a short time to a clear, lacquer-like coat, and unless it is washed or rained off, it is good for years. You won't believe it until you try it!
