

I am a recent patient of BalanceMD. I had been suffering from vertigo, dizziness, migraine for most of my adult life. I was referred to Dr. Sanders by my optometrist when he realized I had trouble with motion.

Testing and examination, I was diagnosed with Migraine Associated Dizziness and Vestibular Neuritis which cannot be cured but can be corrected with therapy.

After 2 months of learning my therapy, I have not experienced any of the symptoms but will need to keep up my therapy each day. This is my new life and I feel great!

Thanks you Dr. Scott Sanders and Staff!
