

**Rabbit Anti-c-Myb Phospho Ser11 [SZ04-81]: RM0410**

**Intended Use:** For Research Use Only

**Description:** The c-Myb proto-oncogene is a 75 kDa protein involved in growth regulation and differentiation in many different cell types but it is predominantly expressed in immature hemopoietic cells where it plays an important role in cell proliferation. c-Myb activity is directly regulated by cyclin D1 and CDKs and it is believed that c-Myb activity is regulated during the cell cycle in hematopoietic cells. Disrupting c-myb function might, therefore, prove an effective therapeutic strategy for controlling leukemic cell growth. c-Myb binds to promoter sequences of genes such as c-Myc or Bcl-2 that are expressed in cutaneous T-cell lymphoma.

**Specifications:**

Clone: SZ04-81  
Source: Rabbit  
Isotype: IgG  
Reactivity: Human  
Localization: Nucleus  
Formulation: Antibody in PBS pH7.4, containing BSA and  $\leq 0.09\%$  sodium azide (NaN<sub>3</sub>)  
Storage: Store at 2°- 8°C  
Applications: IHC  
Package:

Description	Catalog No.	Size
c-Myb Phospho Ser11 Concentrated	RM0410	1 ml

**IHC Procedure\*:**

Positive Control Tissue: Cervical carcinoma  
Concentrated Dilution: 10-50  
Pretreatment: Citrate pH6.0 or EDTA pH8.0, 15 minutes using Pressure Cooker, or 30-60 minutes using water bath at 95°-99°C  
Incubation Time and Temp: 30-60 minutes @ RT  
Detection: Refer to the detection system manual

\* Result should be confirmed by an established diagnostic procedure.

FFPE human breast carcinoma stained with anti-C-Myb Phospho Ser11 using DAB
