

## AMI Power Products, Inc.

**Polymer Cable Insulator Saddles** are made from injection molded glass-filled polymer to create a strong, long lasting cable saddle for use with underground cable support arms in vaults and manholes. The fiber-reinforced polymer is both non-conductive and non-corrosive for long-term durability and emits low, harmless smoke if exposed to fire. Two openings are provided at the opposing saddle tips for feeding the cable tie underneath the saddle, which secures the cable tightly to the saddle.

Part Number	Length (in)	Width (in)	Height (in)
