

# Arts are 'Eternal'

+1 more By Barbara Corbellini Duarte Staff writer

Afro-Cuban and Indian flair meet.

Growing up in India, choreographer Ranjana Warier knew little about Afro-Cuban culture.

"I knew Cuba existed. That was it," she recalls with a laugh. "I knew there was Cuba, and I knew there was Africa, but I had no exposure whatsoever."

Today, Warier is the artistic director of "Surya: The Eternal Rhythm," a project that merges Afro-Cuban and Indian cultures through dance, poetry and music. The show, a 2014 winner of a Knight Arts Challenge grant by the Knight Foundation, will take place Saturday at the Wolfson Campus Auditorium at Miami Dade College.

"We all might talk differently, and we might portray things differently, but when you look deep down, it appears to be the same human spirit shining through different kinds of lights," she says. "That is actually very encouraging, especially in today's world. Many of us think we're quite different, and that's where conflicts start. But when you start understanding diversity a little bit better, you realize how close we are."

The project started with a poem by

Miami-based poet Adrian Castro, who often writes about AfroCaribbean culture, history and myths. Lissette Mendez, director of Miami Book Fair International, introduced Warier to Castro's poetry, and his work immediately absorbed her.

She was so moved by one poem, ti-

tled "Clay, Chalk and Charcoal" and inspired by the African religion Yoruba, that she based a new choreography on it.

"I lost track of how many times I read it. It's like a Renoir, [in] that the longer you look, you start seeing the details and all the different things," Warier says. "I read it over and over, and each time I felt I was adding one more piece of the puzzle, not knowing what I was putting together. It seemed it had many layers, and as a dancer, I could just feel the rhythm." →

"Surya: The Eternal Rhythm" merges Afro-Cuban and Indian cultures in a show that features dance, poetry and music. It will take place Saturday.
