Date _____

1. Use the area model to find the product. Then complete the equation.

$$\frac{3}{4} \times \frac{6}{5}$$

$$\frac{3}{4} \times \frac{6}{5} = \underline{\quad} \times \underline{\quad} \times \underline{\quad} \times \underline{\quad}$$

$$= \underline{\quad}$$

$$= \underline{\quad}$$

Make a simpler problem. Show your thinking. Then multiply.

2. $\frac{3}{5} \times \frac{4}{3} = \underline{\quad}$

3. $\frac{5}{2} \times \frac{4}{6} = \underline{\quad}$

4. $\frac{5}{11} \times \frac{9}{4} = \underline{\quad}$

5. $\frac{7}{12} \times \frac{7}{3} = \underline{\quad}$

REMEMBER

Use the Read–Draw–Write process to solve the problem.

6. One year, it snowed $18\frac{2}{5}$ inches in Baltimore. That same year, it snowed $12\frac{4}{7}$ inches in Louisville. How many more inches of snow fell in Baltimore that year than in Louisville?
