Clean Solutions is a leading competitor in the fluid waste industry. Protecting our clients is our *first priority*, as our plant operations continuously meets all state regulations including the Board of Oil & Gas, Department of Environmental Quality, and the Environmental Pollution Control.

Clean Solutions boasts some of the most effective pieces of fluid processing machines in the industry. All of the automated equipment is located in a central operating room to easily monitoring temperatures, pressures, fluid flow, tank levels, and processing speeds.

Our facility also owns its own Class 2 injection well, monitored by the Board of Oil & Gas. The well is capable of exceeding 7,000 barrels per day making it one of the highest rated injection wells in the Bakken Oil Basin.

Clean Solutions has its own in-house laboratory, which enables our experienced staff to fully understand each fluid type that comes into our facility which includes PH levels, oil recovery, H2s monitoring, and chemical treatment. As a result, we can help our clients understand their fluid problems as well.

Clean Solutions is situated on the North Dakota / Montana border in Bainville, Montana
