

Lesson 9:

Multiply two- and three-digit numbers by two-digit numbers by using the standard algorithm.

CCSS Standard –5.NBT.B.5

FLUENCY (15-min)

Multiply by Multiples of 10, 100, 1,000, and 10,000

Write the product.

1.	$1 \times 20 = \underline{\hspace{2cm}}$	20
2.	$2 \times 600 = \underline{\hspace{2cm}}$	1,200
3.	$3 \times 9,000 = \underline{\hspace{2cm}}$	27,000

Sprint A

38.	$20,000 \times 5 =$	_____

Number Correct: _____

STOP!!

Underline the last problem that you did.

I am going to read the answers. If you got it right, call out "Yes!"

Count the number you got **correct** and write the number at the top of the page.

THIS WILL BE YOUR PERSONAL GOAL FOR SPRINT B

Sprint A

FLUENCY (15-min)

Multiply by Multiples of 10, 100, 1,000, and 10,000

Write the product.

1.	$1 \times 20 = \underline{\hspace{2cm}}$	20
2.	$2 \times 600 = \underline{\hspace{2cm}}$	1,200
3.	$3 \times 9,000 = \underline{\hspace{2cm}}$	27,000

Sprint B

FLUENCY (15-min)

Multiply by Multiples of 10, 100, 1,000, and 10,000

B

Write the product.

Number Correct: _____

Improvement: _____

STOP!!

Underline the last problem that you did.

I am going to read the answers. If you got it right, call out "Yes!"

Count the number you got **correct** and write the number at the top of the page.

Determine your improvement score!

LAUNCH (5-min)

Discuss a real-world use of an area model.

Painting a Mural Video

What did you notice in the video?

What do you wonder?

Does having the factors broken apart by place value help you multiply?

$28 \times 63 =$ _____

Area Model

A vertical addition of the partial products from the area model. The numbers are 1200, 480, 60, and 24, with a plus sign between 60 and 24. A blue bracket groups these four numbers. Below them is a horizontal line, followed by the sum 1,764.

Exit Ticket

Consider the expression shown.

$$446 \times 81$$

a. Draw an area model to find the partial products.

b. Multiply by using the standard algorithm.
