

## asTech™ Remote Diagnostic Device

The asTech™ remote diagnostic device is a simple scan tool that enables repair shops of all sizes across the nation to work on repairing a large range of vehicles, no matter how complex. With our patented scan technology, repair shops can provide a complete diagnostic and repair without having to send the vehicle to a dealership upon completion.

### How Does The asTech™ Work?

The asTech™ device connects to our master technicians over a simple internet connection. Using the patented scan technology, the vehicle can then be scanned for issues that may cause malfunctions within the sensor systems or lit warning lights with no visible cause. Each scan generates a full report, which is sent to shop management for easy record keeping and insurance reimbursement.

### Who are the asTech™ Master Technicians?

A team of master technicians with real world repair shop experience and a fully stocked library of resources to provide you with the ultimate support. With a combined 150 years of experience in the industry, our technicians are qualified and prepared to help you identify issues that exist within the vehicle and the right repairs needed to restore the vehicle to perfect condition.

### Easy Record Keeping

asTech service provides documentation of every scan performed.

### Identifies Hidden Issues

The asTech unit can identify issues within the vehicle's internal sensor systems that may be difficult to identify by a visual inspection.

### Supports Multiple Makes and Models

The asTech unit connects to vehicles from most popular manufacturers.

### Simple Setup and Operation

The asTech unit is easy to set up and only requires an internet connection to work.
