

- Location-Based Services (LBS), including GPS, WiFi and cellular triangulation
- Proprietary algorithm helps determine if the user is at home, enabling faster dispatch
- Low battery and power off text message and email alerts
- e911 Technology for phase two locations for Belle

Features of Orion:

Orion powers Freus mPERS devices to connect users to care specialists and enable them receive assistance around the clock, at home and away.

Orion and the User

Orion is a fully geographic redundant system, with Freus and Orion data replicated between two geographically distant locations. Orion applications can seamlessly switch from one site to the other as needed without affecting dealers and customers. Redundancy is a fail-safe measure designed to protect the operational use and support of Freus devices and the Orion platform.

A Remote Redundant System

The Orion cloud-based platform integrates Freus mPERS devices with cellular networks and AvantGuard Monitoring Centers. In addition to fueling the functionality of Freus devices, Orion also provides tools to help dealers manage their businesses.

Dealer Tools in Orion

- Orion provides dealers with a centralized web-based portal to manage all of their customers' devices 24/7.
- Multiple ways to activate
- Easy device management
- Quick order fulfillment tool
- Dealer marketing portal with complimentary customization
- Frequent updates to meet dealer and customer needs
