Cancellation deadline is Friday, January 9th.*

Location / Directions: Please see attachment "Meeting Location"

Toxins in Paints and Coatings – What Engineers Need To Know

Burt Olhiser
Vantage Point Consulting

Attendees of this presentation will learn what common regulated metals are present in coatings. This not only includes lead which is commonly known, but also arsenic, cadmium, hex-chrome and others. Attendees will also learn about why and in what coatings PCB's were used. Most importantly for many in attendance will be detailed information on how they can address these issues from a project management standpoint, by employing concise and accurate language in project specifications.

Burt Olhiser founded **Vantage Point Consulting (VP)** in 1991 after a 15-year stint as a successful Northern California painting contractor. He initially provided safety, training and business consulting services to his peers. In 1992 he returned to school at UC Davis where he became an instructor for the EPA's Western Regional Lead Training Center until that program's closure. He then began teaching at the UC Berkeley Center for Occupational & Environmental Health lead program where he still serves as a primary instructor. From 1994 to 2000 Burt served as Environmental Health & Safety Director and Quality Control Manager for one of California's largest industrial painting contractors: Jeffco Painting & Coatings, Inc. Burt is a certified NACE Level III peer reviewed coatings inspector. He is licensed by the State of California as a CAC (Certified Asbestos Consultant) as well as a Lead Related Construction Professional, Risk Assessor/Inspector, Project Monitor and Project Designer.
