This NASA six degrees of freedom High Precision Motorized Optical Table used a 4" (100 mm) aluminum breadboard with a grid of mounting M6 holes. The system base was made of a welded steel frame with a powder coated finish. Frames were filled with sand to reduce the table natural frequency and provide passive damping. When in use, the table rests on four machinery feet. When in transport, the feet are retracted and casters allow for easy handling. To learn more about NASA please go to: <http://www.nasa.gov/>
