**Ozone insufflation is ozone gas administration to the body through a bag and tube** into the rectum, vagina (females) or the ears. The ozone diffuses locally into the local tissues gains access to the blood. While blood levels are less than with intravenous techniques the user may perform this technique daily to achieve the desired health results.

## **For ozone use (insufflation) at home, you need:**

- A. An ozone generator or unit (smaller than a show-box) and a oxygen flow regulator (and disposables)
- B. Medical grade oxygen and a tank to put it.
- C. Additional replacement disposables
- D. Support and assistance.

**A. To get a high quality ozone generator with a discount for home use go online either of the following websites:**

### **1. Promo life.com**
