

Metal Roofing

The main factor that homeowners consider when looking for a roofing option involves longevity and durability. Metal roofs have been found to last between 40 and 70 years, but it depends on the gauge, the material, and of course, the weather. When looking for a metal roof, you will first want to consider the environment the roof will be in. Is your home prone to hail, high volumes of snow, or high winds? Because metal roofing options can vary greatly, choosing the right panel system, fastener system, paint system and color depends on your needs, taste and budget. Below are some options for starting your search and gaining a better understanding of the types of metal panel systems available today.

Corrugated Roofing Panels

Exposed Fastener

Corrugated roofing has been around for over 100 years, offering great protection, and are an upward trend in designs using metal roofing. The durability of its consistent corrugation design helps hide small imperfections over time from weather or impacts and is surprisingly affordable. The metal that is used in these types of roof systems comes in two different gauges: 26, and 29 with 26 being the thickest gauge. Corrugated metal systems have been used across the country for years and is becoming a popular choice by many today.

Multi-Rib Panels

Exposed Fastener

One of the most popular and affordable panel systems out there and the “jack-of-all-trades” for metal roofing, siding, and modern accents. Originally designed for agricultural buildings, Ribbed panels are built to last, stands up to wind, hail, snow, and look great.

Finish it off with a sleek-looking trim and this panel shines as a residential roof. You can install the panel horizontally as a wainscot and you’ve got a modern-industrial accent that makes your project complete. The metal that is used in these types applications comes in two different gauges: 26, and 29 with 26 being the thickest gauge. You can count on Multi-Rib Panels to work hard on the ranch, take care of business on commercial builds, or protect your family from the elements. This panel does it all.

Standing Seam Metal Roof

Concealed Fastener

A standing seam metal roof is a premium roofing system used by millions of people in the United States. A standing seam roof, has a definable seam that extends vertically from the panel’s flat surface. This seam helps provide additional rigidity and support making it a favorite of both residential and commercial applications. Using concealed fasteners, the hidden fastener is not puncturing the panel itself, nor is exposed to weather. This usually translates to a higher level of protection from the elements, less maintenance to check for worn or loose fasteners, and a more appealing look. The metal that is used in these types applications comes in two different gauges: 24, and 26 with 24 being the thickest gauge. Other standing seam metal benefits;

- Concealed Fastener for improved appearance and performance
- Hail and fire resistant
- 26 or 24 gauge with 16” cover width appearance
- Energy efficient
- Up to 40 year limited finish warranty
- Available in Kynar500 paint or Galvalume
- Strengthened with minor ribs or striations to reduce the “wavy” effect.
