Weatherproofing Made Simple

Standard Storm Collars® "STD Storm Collars"

For Our Specifiers

Standard Storm Collars (STD) are used by builders, contractors and building owners as a speedy, efficient roof penetration counter flashing that is put onto a roof penetration as a slide on from the top installation. Each STD collar uses a stainless steel hose clamp to secure it onto the roof penetration making them uniquely durable and maintenance free.

Please review the following sample specification for your convenience.

Best Material Choice

All Industries, LLC STD Storm Collars are fabricated in the USA using first quality, non-recycled ethylene propylene diene monomer (E.P.D.M.) rubber that is exceptionally resistant to heat, ozone and acid rain environments. E.P.D.M. is a superior rubber hybrid material that withstands high and low temperature extremes (minus 40 deg. F to 180 deg. F). No plastic resin materials are acceptable as any part of a Weatherproof Storm Collar, to assure long life. Our products carry a 20-year product replacement guarantee.

Innovative

STD storm Collars weatherproof single, or closely grouped multiple pipe roof penetrations. Choose a pre-molded Storm Collar design with the correct number or size of openings for the application. STD Storm Collars are weatherproof umbrellas that slide over the top of a penetration. Disassembly of some penetrations may be necessary in order to install an STD storm Collar. Each Storm Collar weatherproofs one pipe or a group of pipes. Examples include twin electric conduits, air-conditioning line sets, stack vents and worn out single vent pipe galvanized/plastic boot flashings.

The pre-molded conical shape of the Storm Collar creates a weatherproof umbrella. The top surface of the Storm Collar accepts the exact size of the penetration and includes rubber nipples that extend perpendicular from the top of the Collar designed to accept a ½" wide stainless steel band clamp that compresses the nipple tightly onto the penetration. Each Weatherproof Storm Collar includes one watertight umbrella with correctly sized nipple openings, and stainless steel band clamps that fit securely around each nipple.

All Style's Weatherproof Storm Collars counter flash a roof jack flashing previously installed into a roofing system. Roof jack flashings are not included as part of the Storm Collar assembly.

Storm Collar assemblies float above each corresponding roof jack allowing for the free movement or expansion of the penetrating pipe or group of pipes. At no time is the Storm Collar attached to the flashing jack assembly, nor is it ever attached to the roof membrane.

Promoting Green Roof Technologies

Our Storm Collars do not use volatile organic compounds (VOCs) found in primers, solvents or adhesives which hurt the environment and worker's lungs. There is no need for fancy equipment such as respirators to protect workers when installing our Collars. All they will need is a screwdriver. Additionally, because our Collars are long lasting, they will not be filling up the landfills anytime soon.

Color Versatility

Storm Collars are available as standard black or custom colors if requested. We handle Special requests with lightning speed, so do not be afraid to ask!

Full Technical Support

All Style provides a full compliment of roof accessories and products, together with the full technical support required to meet your needs.
