TDI Refrigeration Customer Nets \$14,000 Rebate Check Earn Big Incentives for Improving Your HVAC System

Retirement usually means taking a pay cut, but with Southern California Edison's *Early Retirement* program, retiring older HVAC units can earn you a big check.

HVAC accounts for a significant portion of the state's energy consumption, with older systems being the biggest offenders. SCE established the *Early Retirement* program as an incentive to upgrade your aged HVAC equipment sooner rather than later.

Call TDI and schedule an appointment with a NATE Certified technician. Our technician will see if your equipment qualifies for the program and how we can save you money!

A TDI customer recently took advantage of our offer by replacing two units and earned a **\$14,000 rebate!** They will also enjoy a much lower energy bill, boosting their bottom line for years to come.

Call [TDI Refrigeration](http://www.tdi-refrigeration.com) at (866) 383-2653 to learn if your system qualifies for the program.

**Not all equipment qualifies*

SCE's Quality Maintenance Program Offers Great Savings Too

SCE will also pay you to keep your HVAC units running in optimal condition. Their *Quality Maintenance* program offers incentives to facilities that aim to keep their equipment maintained per Standard 180, the highest industry standard.

Qualify for this incentive by enrolling in a three-year preventative maintenance program with TDI. Our certified technicians will assess the condition of your HVAC units and outline a scheduled maintenance and testing program to keep them running at optimum efficiency.

The efficiency pays three ways: you'll get money from SCE, have lower energy bills, and your equipment will last longer.

[Contact TDI Refrigeration](#) to cash in on SCE's Early Retirement and Quality Maintenance programs.

■ New AQMD Compliance Regulations Hit March 1st

■

■

Air Quality Management District (AQMD) will soon phase in new requirements for facilities with full charge capacity between 50 lbs. and 200 lbs. Compliance with Rule 1415.1 is mandatory starting March 1st, requiring facilities to:

- Register with the California Air Resources Board (CARB).
- Conduct periodic leak inspections based on the refrigeration system's full charge capacity or install automatic leak detection devices.
- Repair leaks within 14 days.
- Maintain records of leak inspections, repairs and service, and receipts for refrigerant purchases.
- Submit annual reports to CARB.

Many facility managers have expressed concern with the burden of all the paperwork that is necessary for compliance.

TDI Refrigeration eliminates those concerns.

While many facilities are still dealing with paperwork—which tends to get misplaced or damaged, creating record-keeping nightmares—TDI Refrigeration has gone digital. Our integrated paperless system offers digital service orders, invoices, and AQMD forms stored online. You won't have to worry about a thing.

TDI's experienced techs will also keep your equipment operating at its best. They use the latest high-tech electronic leak detection methods, and never dyes that can contaminate your system.

Don't let new regulations be a thorn in your side. Call TDI Refrigeration today at (866) 383-2653 and we'll help you out.
