

ECLIPSE OF THE CROSS

ASTRONOMICAL PROPERTIES OF THE DEATH OF THE LAMB

The purpose of this illustration is to show the Astronomical Positioning that happened during the time Jesus was on the Cross of Calvary. In fact it is the case that the actual Crucifixion Date was on Passover in April 14, 32 AD, what is unique to the other contested dates such as April 3, 33 AD is that there was a Planetary Alignment juxtaposed to the Cross. This is the case if one renders the Ecliptic to show all the Cardinal Points in the same illustrative frame. Many cite the fact that there was a Solar Eclipse at Noon and then a Lunar Eclipse Midnight. It occurred at the Ancient Altar of Libra. It was also a Blood Moon as in the case in Egypt where the 1st Passover commemoration started. However, a Solar Eclipse would be impossible to have happen both at the same day. Thus the Solar Eclipse was caused by another Celestial Body. Pertaining to the Passover Planetary Alignment, if one were standing at the foot of the Cross facing North as Jesus was facing South and looked up at the Sky, the following is what one would have witnessed. This scenario is assuming that from 12 noon to 3pm, the Total Darkness covering the whole Earth was due to this Eclipse.

A Menorah of Planets
This illustration suggests that in the Biblical context and definition of the Planets during the day of Jesu's Crucifixion, in all there were 7 Celestial Bodies present that made-up the Astronomical Storyline that accompanied and accented the Crucifixion of Jesus that day. Out of the 7 Celestial Bodies, 6 can be verified by the latest and amazing software models and the Ancient Peoples could have only dreamt about using. What took decades and even a life time of research can now be obtained within seconds or minutes at the click of a Mouse The 6 Celestial Bodies that fanned the Crucifixion Site from the East to the West that day were the following.

- | Planet | In Constellation |
|----------------|------------------|
| 1. Uranus | Leo |
| 2. Saturn | Cancer |
| 3. Jupiter | Taurus |
| 4. (Planet X)? | Aries |
| 5. Sun | Aries |
| 6. Venus | Cetus |
| 7. Mercury | Pisces |

יהוה
TETRAGRAMMATON

ישוע הנצרי ומלך היהודים
YESHUA NAZARENE and KING OF THE JEWS

The planetary alignments and those on the Ecliptic at the time of the crucifixion displays the approximate Spectrum of Visible Light. The Planet's colors based on their Resonance or Frequency approximates the color of the Rainbow. Such as the Sign of Noah. Jupiter takes the position of the Servant Stem, Jesus.

Contrary to many historical and artistic renditions of the Crucifixion, the Crucifixion spot was between the Skull Façade and the Garden Tomb. The Crucifixion spot was not atop the Skull Façade or just any arbitrary place but it was against the rampart that made-up pinnacle of Mount Moriah. Mathematically this spot approximates the phi ratio proportion of the distances that made-up the 3 points of the Crucifixion events and localities that day.

GARDEN TOMB
Based on some celestial evidence and patterns, Jesus was born on September 11, -3 BC. The second supposition is that Jesus was 33 years old but was crucified on Passover, April 14, 32 AD. Given this timeline, it would correspond precisely then how Jesus was 33 in the year 32 AD. Based on prior studies of the Crucifixion, it is established that Golgotha or the Place of the Skull that is adjacent to the Garden Tomb was where Jesus was crucified and the correct location.
