

Mouse Anti-Annexin 13/Annexin A13 [H1]: MC0254

Intended Use: For Research Use Only

Description: The Annexins constitute a family of structurally-related, relatively abundant proteins that exhibit Ca²⁺-dependent binding to phospholipids. Annexins function in multiple aspects of cell biology including regulation of membrane trafficking, transmembrane channel activity, inhibition of phospholipase A2, inhibition of coagulation and mediation of cell-matrix interactions. Annexin A13 is considered the original progenitor of the 12 members of vertebrate Annexins. The expression of Annexin A13 is highly tissue-specific, being expressed only in intestinal and kidney epithelial cells. This expression is associated with a highly differentiated intracellular transport function. Two alternative splicing isoforms of Annexin A13 exist, both of which bind to rafts.

Specifications

Clone: H1
Source: Mouse
Isotype: IgG2a/k
Localization: Membrane
Formulation: Antibody in PBS pH7.4, containing BSA and ≤ 0.09% sodium azide (NaN₃)
Storage: Store at 2°- 8°C
Applications: IHC, ELISA, IF, IP WB
Package:

Description	Catalog No.	Size
Annexin 13/Annexin A13 Concentrated	MC0254	1 ml

IHC Procedure*

Positive Control Tissue: Gall bladder, colon cancer
Concentrated Dilution: 50-200
Pretreatment: Citrate pH6.0 or EDTA pH8.0 15 minutes using Pressure Cooker, or 30-60 minutes using water bath at 95°-99°C
Incubation Time and Temp: 30-60 minutes @ RT
Detection: Refer to the detection system manual

* Result should be confirmed by an established diagnostic procedure.

FFPE human gall bladder stained with anti-Annexin A10 using DAB
