

Product Description

BENTA max is a binding and preservative premix for raw materials and animal feed containing aluminosilicate, yeast culture, gelling agent and marigold extract, that are effective in adsorbing electrically charged particles and managing the risk of mycotoxins in feed and raw material.

Overview

BENTA max is a multi-ingredient product to protect the well-being of livestock by maintaining the overall quality of the feed.

- Reduces feed deterioration caused by molds and their metabolites.
- It is an excellent risk management tool against the broad spectrum of molds known to produce mycotoxins.
- BENTA max also helps maintain a healthy immune response, normal reproduction parameters and intestinal integrity.

Feeding Instructions

Incorporate into a finished feed or raw material at a rate of:

- Poultry: 0.5 – 1.5 kg/ton
- Swine starter feeds until weaning: 1.0 – 2.5 kg/ton
- Swine grower/finisher feeds: 0.5 – 2.0 kg/ton
- Swine sow feeds: 1.0 – 2.5 kg/ton
- Calves: 1.0 – 2.0 kg/ton
- Dairy cows: 20-50 g/head/day
- Others species: 0.5 – 2.5 kg/ton

Nutrient Values

BENTA max does not alter the nutritional value of final feed or affect any other feed ingredients.

Active Ingredients

- Bentonite-montmorillonite
- Diatomaceous earth
- Yeast products
- Lecithin
- Marigold extract

Product Characteristics

- Appearance: Light-brown, fine powder
- Odor: None
- Bulk Density: 0,5 g/ml
- Packaging: 25 kg bag
- Shelf Life: 12 months from manufacture date when stored under conditions specified

Storage Instructions

Store between 5°C – 30°C in a dry place protected from light, heat and humidity.
