

Mouse Anti-CTXI (Cross Linked C-Telopeptide Of Type I Collagen) [C6]: MC0019

Intended Use: For Research Use Only

Description: Cross-Linked Telopeptides C-telopeptides (CTX), is the C-terminal telopeptide of fibrillar collagens such as collagen type I (CTXI) and type II (CTXII). It is used as a biomarker in the serum to measure the rate of bone turnover. The CTXI is a sensitive but also rather variable marker of bone resorption. It can be useful in assisting to determine a patient's nonsurgical treatment response as well as evaluate a patient's risk of developing complications during healing following surgical intervention. Two biochemical markers reflecting degradation of CTX, which is released by cathepsin K cleavage of intact bone collagen.

Specifications

Clone: C6
Source: Mouse
Isotype: IgG2b/k
Reactivity: Human
Immunogen: Synthetic Peptide of CTXI conjugated to KLH
Localization: Cytoplasm
Formulation: Antibody in PBS pH7.4, containing BSA and $\leq 0.09\%$ sodium azide (NaN₃)
Storage: Store at 2°- 8°C
Applications: IHC, ICC/IF, WB
Package:

Description	Catalog No.	Size
CTXI (Cross Linked C-Telopeptide Of Type I Collagen) Concentrated	MC0019	1 ml

IHC Procedure*

Positive Control Tissue: Liver, kidney, liver or lung cancer
Concentrated Dilution: 10-50
Pretreatment: Tris EDTA pH9.0, 15 minutes using Pressure Cooker, or 30-60 minutes using water bath at 95°-99°C
Incubation Time and Temp: Overnight @ 4°C
Detection: Refer to the detection system manual

* Result should be confirmed by an established diagnostic procedure.

FFPE human liver stained with anti-CTXI using DAB
