Yellow Beans

2022-23 Marketing Program

Rudy Agro Ltd. (RAL) is pleased to introduce our 2022-23 Yellow Beans (Mayacoba) Marketing Program.

RAL's 2022-23 Program Highlights:

- ◆ Fixed price with an act of God available on up to 1500 lbs/acre on beans grading an RAL #1 or Canada #2;
- ◆ Balance of production can either enter the Agreed Price Option, or RAL's Pool Option.

Agreed Price Option

- ◆ We use 3 pricing stages whereby after mutual agreement from our posted daily bid price the crop would be priced in 3 stages on or before:
 - September 30, current crop year (up to the first 1500 lbs);
 - December 30, the second third of the harvested quantity;
 - March 1 of the following year.
- ◆ Upon pricing of the beans, settlement is sent within 10 days.

Pooled Price Option

- ◆ Under the pooled option, let RAL's marketing team market your production on your behalf. Again, you can fix price up to 1500 lbs per acre with an act of God, then we establish an estimated pool price in August for the balance of your production.
- ◆ After the fixed portion is settled, you will receive the initial pool price on the balance of your deliveries on:
 - November 30, one-third (less the fixed portion);
 - March 30, the second third;
 - June 30, the final third;
 - Final payment based on the marketing pool's performance to be paid on or before September 15 of the following crop year.

Certified CDC Sunburst seed is available at the current price of CAD\$165.00 per unit FOB Outlook in totes with base treatment. Target plant population is 80,000 with a recommended seeding rate of 0.85 units per acre. Seed cost then averages CAD\$157.00 per acre. Seed can be financed until fall delivery.

Rudy Agro will be accepting 100% of the harvested product "off-combine".
