## Choosing a Drum Style

**SMOOTH** drum used for sand, gravel, pea rock and asphalt patching<sup>†</sup>. **PADDED** drum used for heavy soils, clay and clay-based backfill. <sup>†</sup>A Bobcat water kit is recommended for asphalt patching.

### Features

- Free drum oscillation keeps more of the drum in contact with the surface on uneven terrain.
- Offset drum design allows right side of roller to extend past the machine. This is very useful when compacting next to sidewalks, walls or curbs.
- Durable one-piece drum for extra strength.
- Dual-direction vibration motor permits compaction while traveling in either direction.
- Rubber isolation mounts on roller reduce vibration transfer to loader and operator.
- Both smooth and padded drums are available.
