Specific Techniques for Execution of

Construction Services:

- Integrated Project Delivery
- Lean Construction Practices

BuildSmart Enterprises, LLC (BuildSmart) is a construction services firm that provides client-focused construction management and general contracting services for public agencies, developers, or private corporations. BuildSmart brings a highly experienced leadership team to plan, procure, manage, and execute construction capital improvements in an efficient and sustainable manner. We are builders that also serve as planners and managers. Our approach is to (first) learn about your business, then apply our forward-thinking and performance-driven approach to ensure that the construction process compliments your business, not hinder your business. We are problem-solvers, not simply problem-reporters. Our holistic management style eliminates delays, safety concerns, or quality control issues that tend to plague some construction programs.
