

# GET IN THE ZONE WITH GROZONE

## GROZONE CO<sub>2</sub> CONTROLLERS

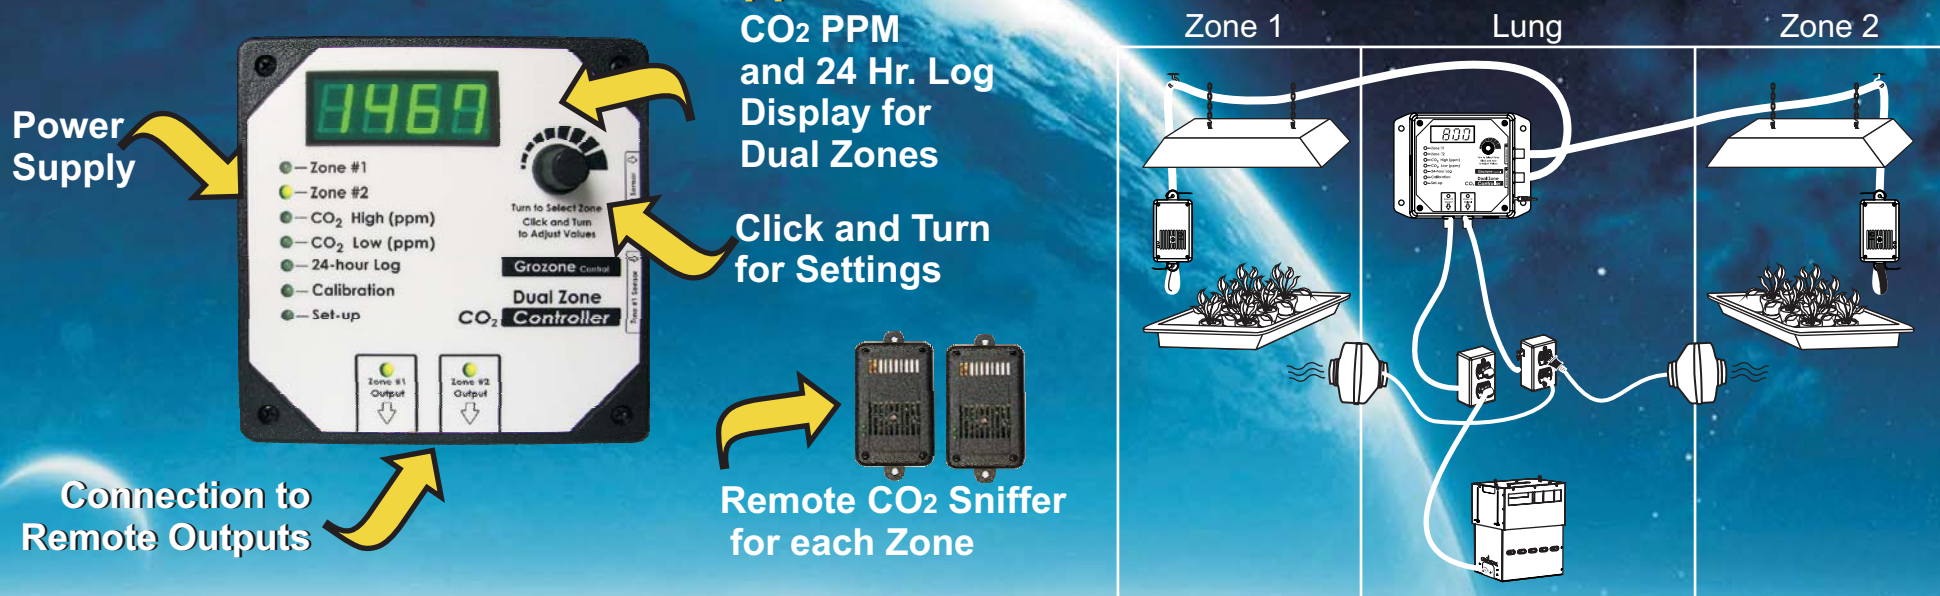

GROZONE's easy to use CO<sub>2</sub> controllers determine precisely when to activate and shut-off CO<sub>2</sub> generators while maintaining user-defined LOW and HIGH CO<sub>2</sub> values in the grow room. These units can deactivate CO<sub>2</sub> enrichment during the night cycle and perform CO<sub>2</sub> evacuation as well. For the SCO2 and the CO2R model the CO<sub>2</sub> sensor is located inside the controller module; remote CO<sub>2</sub> sensors deliver readings on the CO2D controller. All GROZONE controllers are made from the highest quality components to ensure dependability.

### CO2R: 0-5000 ppm with AUX Output and High Temp Shut Off

### CO2D: 0-5000 ppm Dual Zone and Remote Sensors
