bSMART® Risk - Flexible Risk and Threat Analysis

bSMART® is an Enterprise-Class Risk Assessment Software Tool, that provides in-depth understanding of risk, from strategic planning through crisis management, giving leaders an edge to successfully navigate dynamic challenges.

- Dynamic Analysis of Risk
- Converged Operations, Physical & Cyber Assessment
- Smart Surveys & Map/Graphics Interface Streamline Data Collection
- Management Dashboard & Visualized Results

- Integrated Program Management
- Benefits realized across the Enterprise
- Hosted or Standalone Applications
- Desktop and Mobile Ready
- Enterprise-Class Encryption and Security
- Key Performance Metrics

bSMART® Risk extends risk assessment from an established strategic planning resource to an *up-to-date decision support system*. This is achieved through *consistent, predictable, and defendable* assessment of complex risk. **Assets** (Equipment, Facilities, Processes), **Threats** (natural hazard and manmade), **Vulnerabilities**, and **Protective Measures** *are all addressed*. Trends and indicators can be analyzed by company, industry, geographic region, etc. Once the initial analysis is performed for a site, product, process, or enterprise, bSMART® becomes a *"what if" tool* for **business planning, crisis & emergency response planning, and tabletop training** exercises.

Users are able to *define, develop, and implement highly effective programs* for security, business operations, emergency planning, safety and more.

bSMART®'s **management dashboard** shows current conditions and shifts in key risk elements as conditions change, alerting leaders and providing current information to support immediate decisions.

bSMART® Risk is compliant with all major risk assessment standards and methodologies.

- ANSI / API STD 780
- NIST Integrated Program Management
- NERC Critical Infrastructure Protection (CIP)
- C-TPAT and NEEC

- ISO31000
- FEMA 452
- ASIS International
- Sandia Risk Assessment Methodology (RAM)

BSMART® Compliance

bSMART Compliance performs and manages compliance processes, allowing for audits and management tracking from individual sites to enterprise-level operations.

REALIZING SUSTAINABLE BUSINESS VALUE THROUGH SECURITY SOLUTIONS
