

## ABOUT OUR VENOM

Our venoms are collected from only healthy individuals and our non-invasive technique insures that all individuals are unharmed. Snakes used for extraction have passed quarantine, feed voluntarily and produce viable offspring They are kept in clean, sanitary conditions and we have had many individuals live longer than their average life span.

All venoms are collected in a sterile manner and frozen at  $-70^{\circ}\text{C}$  before lyophilization. Locale information is available for many species. DNA samples in the form of scale clippings are available. Please inquire about tissue samples. Other venoms than listed are available upon request, contact us for more information. CITIES permits available for all CITIES listed species . Permits cost extra. Prices are for venoms in raw, lyophilized form. Centrifugation and filtering available for an additional fee.

Prices are as of September 2015.  
Prices are subject to change.

Extraction from *Crotalus atrox*

*Dendroaspis angusticeps*
