

## **IT Convergence extends hardware budgets at the same time protecting the environment**

IT Convergence Inc. offers businesses a way to extend their purchasing power by selling previously owned, off lease, and manufacture refurbished computers, laptops, tablets, monitors, and servers at dramatically reduced prices. The reduced costs allow an opportunity for businesses to get up to 3 devices for the cost of 1 without giving up performance.

### **Why Buy Refurbished?**

Refurbished PC's at IT Convergence offer significantly better performance, reliability, and cost ratio. In terms of performance, we have a wide variety of single, dual and quad core PC's available, all of which out-perform their new counterparts at the same price-point. The equipment sold by IT Convergence is corporate-class, which are known to last significantly longer than the new "disposable" PC's available at any major PC retail chain. All PC's from IT Convergence leave the testing facilities with a limited warranty, and also have the option to be extended beyond the stated term. Since IT Convergence only sells equipment that has been certified as being "Microsoft Registered Refurbished", we are able to upgrade any refurbished PC with a Microsoft Windows 7 or 8 License to Windows 10 License for the best customer experience.

IT Convergence strives to offer the best quality products at the absolute lowest price. All equipment is thoroughly tested and cleaned before leaving our testing facilities. The majority of PC's at IT Convergence come off corporate lease, therefore they are still in Grade A cosmetic and working condition. By refurbishing, we ensure the products stay out of the landfills, while offering the optimal customer experience. In addition, IT Convergence is associated with an eCycling (Electronics Recycling) program to ensure the protection of our environment.

### **What We Offer**
