

A Facial Remodeling Miracle!

VENUS VIVA

Microneedling with Nano-Fractional Radio Frequency

VENUS VIVA is a highly-effective and individually customized procedure used to treat a wide range of skin conditions. FDA cleared, VENUS VIVA is applauded by patients with all types of skin—all ethnicities—for achieving maximum results with little downtime. The effectiveness of this facial resurfacing and restorative procedure offers miraculous results for people all ages who suffer with skin damage. From severe acne scarring, Rosacea, fine lines, deep wrinkles, enlarged pores and uneven skin texture or color—VENUS VIVA with Nano-Fractional Radio Frequency is being touted a “Miracle Worker” in eliminating signs of skin aging and damage.

Delivering impressive efficacy through combining Nano-Fractional Radio Frequency and a one-of-a-kind Smart Scan technology, VENUS VIVA is the first system that allows the physician to manually control ablation and coagulation for enhanced treatment efficiency. VENUS VIVA is a revolutionary, fully customizable FDA cleared solution for facial remodeling and resurfacing.

VENUS VIVA vs Other Lasers

As those of us who have had different types of laser work on our faces know... there is always some amount

NO CUTTING Surgery Facelift

Dr. Rahimi: “What makes a face beautiful is SYMMETRY. As we age our faces age at different rates. Sun damage, skin conditions that produce scarring, surgical procedures that leave visible signs, irregular sagging, hollowness, muscle and fat loss—all contribute to creating an older-looking face. Having treated thousands of patients in my more than 25-year medical career, one critical point I never forget: Each person is different and each person requires a specialized treatment plan to achieve desired results. A surgeon with experience and a trained eye for detail can tighten, lift, heal and restore symmetry to the face presenting a more youthful look without cutting surgery. My options were extensive before—after adding VENUS VIVA to my Repair, Refresh, Rejuvenate treatments I have produced unparalleled results for my patients.”

of discomfort after the treatment, and healing time can be extensive—sometimes several weeks because lasers actually remove the top layer of our skin. VENUS VIVA treatments go beyond the top layer—beyond our complexion. These treatments heal, restore and rejuvenate the underlying tissues using micro-pins that automatically and safely deliver heat (via Nano-Fractional Radio Frequency) through the skin’s surface thus creating micro-dermal wounds which the body heals on its own naturally. Because the wounds are very tiny, they heal extremely fast which eliminates the normal days-long pain that’s involved with standard laser procedures. Also, the heated treatments stimulate the growth of collagen fibers to promote an increase of healthy skin cells. Some patients might need one treatment to achieve their goals; others may need more treatments depending on their needs.

As most of us are aware, the sun damage we’ve incurred over the years—and didn’t pay much attention to—has over time become the undoing of a youthful appearance as skin tone, texture and flexibility have decreased, and hyper-pigmentation and stress signs of skin aging have increased. Also over time, our skin incurs both inside and outside damage from a variety of skin conditions, and our bodies carry the scars of injuries and surgeries, weight gain and weight loss. VENUS VIVA offers a new and more improved plan of action to turn back the clock and restore our faces and bodies to the memories we have of more youthful faces and less blemished bodies. VENUS VIVA treatments allow patients to be fully awake throughout the no-pain procedures—while offering physicians the control to manually operate, guide, and treat the exact areas on the face and body. The result: Patients receive enhanced efficiency on their areas of concern. VENUS VIVA is beginning to replace other skin resurfacing treatments because of its pinpoint accuracy in achieving maximum results in treatment sessions that last approximately 30-45 minutes. Patients can return to their daily skincare routine within one to three days. A trivial trade off when the upside is a more youthful face and body! Sign me up! ■
