GUIDELINES FOR EXCLUSION OF SICK CHILDREN FROM CHILD CARE

1. Signs of possible moderate or severe illness: unusual lethargy, irritability, persistent crying, difficulty breathing, and/or inability to function in a group setting.
2. A child exhibiting fever of >100°F axillary or >101°F orally should be excluded for a minimum of 24 hours.
3. Persistent, frequent cough that interferes with the child's activities.
4. Diarrhea defined as an increase in the number of stools, compared with the child's normal pattern with increased stool water and/or decreased form (diarrhea that cannot be contained within diapers or toilet use).
5. Effortful vomiting, unless the vomiting is determined to be non-disease related and the child is not in danger of dehydration.
6. Rash with fever or behavior change; or a rash that is possibly infectious.
7. Chicken pox – 6 days after onset of rash or until all lesions have dried and crusted. Children who receive the chicken pox vaccine should not be excluded unless they develop a rash. Rashes can develop up to 6 weeks after a child receives the vaccine. Rashes from the vaccine usually disappear sooner (within 1-2 days).
8. Strep throat/scarlet fever – until 24hrs. after treatment has been initiated.
9. Impetigo – until 24hrs after treatment has been initiated.
10. Ringworm (head, body, genitals, or feet infection) until 24hrs. after treatment has been initiated.
11. Scabies/head lice – allowed to return to child care the morning after their first treatment.
12. Purulent conjunctivitis (“pink eye”) – defined as pink or red conjunctiva with white or yellow eye discharge, often with matted eyelid after sleep; including a child with eye pain or redness or the eyelid or skin surrounding the eye – until 24hrs. after treatment has been initiated.
13. Mouth sores associated with an inability of the child to control his/her saliva.
14. Failure to comply with New York State Immunization Laws.
15. **A doctor's note is required to clear and permit the child to return to school.**

Tips for Avoiding Your Allergen

- All FDA-regulated manufactured food products that contain a “major food allergen” (milk, wheat, egg, peanuts, tree nuts, fish, crustacean shellfish, and soy) as an ingredient are required by U.S. law to list that allergen on the product label. For tree nuts, fish and crustacean shellfish, the specific type of nut or fish must be listed.
- Read all product labels carefully before purchasing and consuming any item.
- Be aware of unexpected sources of allergens, such as the ingredients listed below.
- *Note: This list does not imply that the allergen is always present in these foods; it is intended to serve as a reminder to always read the label and ask questions about ingredients.

For a Peanut-Free Diet

Avoid foods that contain peanuts or any of these ingredients:

artificial nuts	goobers	nut meat
beer nuts	ground nuts	peanut butter
cold pressed, expeller	mixed nuts	peanut flour
pressed, or extruded	monkey nuts	peanut protein
peanut oil	nut pieces	hydrolysate

Peanut is sometimes found in the following:

African, Asian (especially Chinese, Indian, Indonesian, Thai, and Vietnamese), and Mexican dishes	baked goods (e.g., pastries, cookies) candy (including chocolate candy) chili egg rolls	enchilada sauce marzipan mole sauce nougat
--	--	---

Keep the following in mind:

- Mandelonas are peanuts soaked in almond flavoring.
- The FDA exempts highly refined peanut oil from being labeled as an allergen. Studies show that most allergic individuals can safely eat peanut oil that has been highly refined (not cold pressed, expeller pressed, or extruded peanut oil). Follow your doctor's advice.
- A study showed that unlike other legumes, there is a strong possibility of cross-reaction between peanuts and lupine.
- Arachis oil is peanut oil.
- Many experts advise patients allergic to peanuts to avoid tree nuts as well.
- Sunflower seeds are often produced on equipment shared with peanuts.
- Some alternative nut butters, such as soy nut butter or sunflower seed butter, are produced on equipment shared with other tree nuts and, in some cases, peanuts. Contact the manufacturer before eating these products.

For a Tree-Nut-Free Diet

Avoid foods that contain nuts or any of these ingredients:

almond	hickory nut	nut pieces
artificial nuts	litchi/lychee/lychee nut	pecan
beechnut	macadamia nut	pesto
Brazil nut	marzipan/almond paste	pili nut
butternut	Nangai nut	pine nut (also referred to as Indian, pignoli, pignolia, pignon, piñon, and pinyon nut)
cashew	natural nut extract (e.g., almond, walnut)	pistachio
chestnut	nut butters (e.g., cashew butter)	praline
chinquapin nut	nut meal	shea nut
coconut*	nut meat	walnut
filbert/hazelnut	nut paste (e.g., almond paste)	
gianduja (a chocolate- nut mixture)		
ginkgo nut		

Tree nuts are sometimes found in the following:

black walnut hull extract (flavoring)	nut distillates/alcoholic extracts	walnut hull extract (flavoring)
natural nut extract	nut oils (e.g., walnut oil, almond oil)	

Keep the following in mind:

- Mortadella may contain pistachios.
- There is no evidence that coconut oil and shea nut oil/butter are allergenic.
- Many experts advise patients allergic to tree nuts to avoid peanuts as well.
- Talk to your doctor if you find other nuts not listed here.
- * Coconut, the seed of a drupaceous fruit, has typically not been restricted in the diets of people with tree nut allergy. However, in October of 2006, the FDA began identifying coconut as a tree nut. Medical literature documents a small number of allergic reactions to coconut; most occurred in people who were not allergic to other tree nuts. Ask your doctor if you need to avoid coconut.
