

Mobility In Motion has two great locations to serve the Waterloo-Wellington regions and beyond! For more information, give us a call or stop by and see them for yourself!

The MV-1 is the only purpose-built vehicle that was designed from the ground up for wheelchair accessibility. The MV-1 was engineered according to the principles of Universal Design, which allow for ease of accessibility regardless of any mobility issues. True to those principles, the MV-1 allows for the accessibility of most wheelchairs and scooters, while providing a comfortable and safe ride for all. The integrated deployable ramp has a shallow ramp angle, an anti-slip surface, and is stored under the floor of the vehicle to maximize interior space. The optional power ramp deploys at different aspect ratios to address various vehicle entry and exit scenarios.

Affordability for All

MV-1 Canada has lease and finance options available to give our customers affordable and flexible payment options that fit their specific needs. With over 30 years of history in the lease and finance industries, we can offer individuals and transit agencies alike the right payment and advise you on the best route to take from a finance perspective.

Accessibility

The MV-1 is the only purpose-built vehicle that was designed from the ground up for wheelchair accessibility. The MV-1 was engineered according to the principles of Universal Design, which allow for ease of accessibility regardless of any mobility issues. True to those principles, the MV-1 allows for the accessibility of most wheelchairs and scooters, while providing a comfortable and safe ride for all. The integrated deployable ramp has a shallow ramp angle, an anti-slip surface, and is stored under the floor of the vehicle to maximize interior space. The optional power ramp deploys at different aspect ratios to address various vehicle entry and exit scenarios.

36" by 56" doorway featuring low step-in that allows easy entry for all passengers.

Best-in-class interior room, seating up to 5 comfortably.

Passengers in wheelchairs or scooters can easily enter, effortlessly and sit next to the driver.

Commercial driver's seat for maximum operator comfort.

Safety

Safety features are integrated throughout the vehicle for the protection of all occupants. From the anti-slip surface on the ramp and interior floor to Electronic Stability Control (ESC), the MV-1 combines passive safety with active safety to provide everyone with peace of mind when traveling. The MV-1 meets all applicable U.S. Federal Motor Vehicle Safety Standards (FMVSS) and Canada Motor Vehicle Safety Standards (CMVSS).

Durability

The MV-1, with its incredibly durable body-on-frame vehicle architecture, is built like a truck: strong and dependable. We designed the vehicle with input from fleet owners and drivers, and then road tested it relentlessly. In fact, we've tested prototypes through accelerated durability driving on test tracks that duplicate the toughest roads in the country.

In addition, the integrated ramp has been extensively tested for reliability and durability by continuously deploying it for months at a time, without fail. All of this testing ensures that it works every single time you need it.

A body-on-frame design: the MV-1's frame mounts to the body to create a rigid structure that supports the drive train.

Fully boxed and tube supportive cross members to provide additional frame stiffness and durability.

Built like a truck, yet rides like a car.

Canada Wide Service

MV-1 Canada is proud to partner with NAPA AUTOPRO to give our customers easy access to warranty service from Newfoundland to British Columbia. NAPA AUTOPRO offers professional licensed and trained technicians with courteous service and the convenience of a large network of award-winning automotive service centres.

Factory Warranty

The MV-1 offers extensive bumper to bumper, factory warranty coverage including all factory-built accessible components.

Bumper-to-bumper – 3 Year 60,000kms

Power train – 3 Year 60,000kms

Ramp components – 3 Year 60,000kms

Corrosion protection – 3 Year 60,000kms

The MV-1 is more than an accessible vehicle. It is a clear vision of the future of transportation in Canada. Every province in Canada has either introduced or is currently working on legislation to improve accessibility in all towns and cities to service the needs of a rapidly aging and disabled population.

You face pressure on all sides from citizens and riders, advocates, accessible advisory committees and city councils. Your strategy needs to include not just more status quo accessible transportation, but more accessible transportation solutions, made for your community, and for your business model.
