APPLICATION INSTRUCTIONS:

NACHURS Finish Line fertilizer is supplied in a ready to use liquid form, making its application by spray equipment convenient and easy. Apply with adequate water to ensure thorough spray coverage. It is uniquely adapted to all crops and cropping systems to promote rapid growth and development, especially those crops that have encountered environmental stresses due to hail, insects, etc. **NACHURS Finish Line** fertilizer can be applied with glyphosate and other pesticides for optimum performance. If local information is not available, a jar test for compatibility should be conducted prior to large scale mixing.

GENERAL FOLIAR APPLICATION RATES:

1 to 4 quarts per acre

Forage and Hay Crops – 1–4 quarts after sufficient leaf regrowth, usually between 7 and 10 days after cutting. There are no grazing restrictions.

Cereals and Small Grains – 1–2 quarts per acre at tillering through flag leaf.

Corn, Soybeans, Cotton, Peanuts, Canola, Sugar Beets, Grain Sorghum – 1–2 quarts per acre with in-season herbicide/insecticide applications.

Potatoes – 1–2 quarts per acre at tuber initiation.

Berries and Grapes – 1–2 quarts per acre at leaf emergence and again pre-bloom.

Fruit/Nut Trees – 2–4 quarts per acre at bloom to improve bud set and retention.

Cucurbits – 1–2 quarts per acre when runners are 4–6 inches long.

Other Vegetables (beans, peppers, tomatoes, etc.) – 1–2 quarts pre-bloom.

MIXING INSTRUCTIONS:

NACHURS liquid fertilizers can mix with many crop protection products. Some non-100% EDTA chelates may not be compatible.

1. Add 1/3 water to spray tank
2. Start sprayer agitation and maintain
3. Add pesticides as per label instructions
4. Add 1/3 water
5. Add **NACHURS Finish Line**
6. Add remaining water volume and agitate before spraying

THE ROLE OF MICRONUTRIENTS:

NACHURS Finish Line offers 4 essential micronutrients. All are chelated except Boron:

Boron: Critical for new growth of plant and in pollination and reproductive stages. Essential for maintaining sugar and starch balances.

Copper: Essential in protein formation and for enzyme activation.

Manganese: Vital in chlorophyll development and enzyme systems in the oxidation process.

Zinc: Promotes root development, vigorous shoot growth, stress tolerance, and a more even maturity.

NACHURS Finish Line, as with foliar fertilization in general, is not intended as a replacement for a sound fertility program, but rather as a management tool to help maximize yield and quality.

NACHURS Finish Line is a clean, easy handling product that fits into most crop protection programs. Each drop of foliar has the exact same nutrient ratio, which means it will not settle out of solution.
