Finally, insert both tilting handles (A) in the gearbox motor assembly mounting frame (B) (as shown) and lock using the cotter pin (C)

Disconnect the power cord. Hold the support leg and dump handle and move as shown below. Make sure there is no material in the drum.

When tilting the drum to pour material, do so in a very smooth manner. This keeps the mixer balanced and upright.

Maintenance and Cleaning

Disconnect the power cord

1. Clean thoroughly after each use. Remove all material from the mixer.
2. Lightly grease all moving parts.
3. Keep the motor cooling fins clean and free of buildup.
4. When cleaning the mixer, wipe the On/Off switch assembly and motor with a damp cloth. Do not spray water directly onto this area. Protect motor and switch assembly from rain.

1. Position the mixer on a level surface. (NOTE: Maximum slope is 5 degrees. Before filling the drum, make sure the mixer can empty into a wheel barrow).
2. Use a 3 prong, grounded, 110V/120V power connection. Although the minimum gauges are listed below, we recommend that a 14 gauge (AWG) wire be used for all lengths.

Cord Length (total feet)	25	50	100	150
AWG (wire gauge Bolts)	18	16	16	14
Volts	120			
Amphere Rating	0-6			

3. While the drum is rotating add water, material and aggregate. Secure the stability bolt prior to drum rotation.
4. To pour the material, elevate the dump handle while the drum is rotating.
5. In the event of overheating and your motor shuts down, turn off the On/Off switch and unplug the unit for 15 minutes. After the cooling period, plug in the unit and press the **Manual Reset Thermal Protector button**, then the On/Off switch to on.
