## **Quality Steel Trusses**

Pre-welded purlin cups offer stability and a reduction in construction time. With pre-drilled holes for wood purlins: there is no quicker, cost efficient method.

Additional stability is offered through our stabilizer bar. With pre-drilled holes and the bolts provided with each order, additional stability is achieved quickly.

Additional overhang with purlin cup is standard. Measurements for building size from outside of post to outside of post. Available without overhang per request.

For stability and ease of install standard trusses and shed trusses offer a "bolt to the post" base plate. Standard design is for 6x6 inch post. Will build to requests.

The bolt together design of our steel trusses offers the versatility, durability and ease of install our customers have come to expect. Pre-drilled with bolts provided.

## STEEL TRUSSES

With our Quality Crafted Steel trusses, Forever Posts and other customized building systems, we put our customers in control. If you can imagine it...you can build it!

**Tel: 865-379-7777**

The first step of a building you can be proud of is the foundation. With our "Wet set" or "dry set" bolt down collars, you can start with quality from the very first step. Whether you are building from the ground up or adding to an existing concrete floor... we have the answer.

With 10' centers standard, you will reduce the number of trusses, materials and labor cost.

With pre-welded, pre-drilled purlin cups, install is quicker and easier for even the novice craftsman.

With the Forever Post options, you will begin your building the "right" way every time.
