

Kids Involved with Design and STEAM

KIDS Lab cultivates excitement in technology by engaging students in creative thinking, problem solving and collaboration through discovery-based learning.

A mobile platform allows **KIDS Lab** to be moved from room to room or housed in a dedicated space, depending on the needs and facilities of the school. The mobile platform includes building kits, cloud apps for use on any device (iPad, Chromebook, etc), along with curriculum and training.

KIDS Lab is designed for students in grades K-5 and meets standards for NGSS, Common Core, and Technological Literacy. It also meets the standards teachers expect for fun and engaging curriculum that's easy to implement.

The basic **KIDS Lab** includes:

3D Printers

Afinia H400+ Package

Mobile STEM Labs

Kid Spark ROK Blocks
Kid Spark SnapStack

Electronics

LittleBits STEAM
Education Class Pack

Software

SolidWorks Apps for Kids

Professional Development

Professional Learning
