AlkaViva's UltraWater Ionizer Filter creates the cleanest Alkaline Ionized Water available in today's market. The new technology of the UltraWater Ionizer Filter produces water that is an unprecedented 99.9% Contaminant Reduction. The list of contaminants removed by the UltraWater Filter is extensive. After many years of experience and two intensive years of research and development AlkaViva has patented the UltraWater technology. This AlkaViva exclusive, proprietary filter provides an environmentally sustainable way to create the cleanest and healthiest water available from a Water Ionizer. UltraWater technology is a breakthrough in

reducing many of the contaminants in tap water to non-detectable levels.

Features

The UltraWater Filter contains the highest quality filter media available. UltraWater media is transformed into solid form allowing for greater contact with your water therefore blocking and removing a much higher percentage of contamination than traditional loose media beds.

The UltraWater Filter offers superior removal of chlorine, chloramines, and disinfectant byproducts

Notoriously difficult contaminants including industrial and agricultural chemicals, heavy metals, VOCs, pharmaceuticals and heavy metals such as mercury, lead, nickel and iron. are reduced to almost non-detectable levels

Beneficial minerals remain in the cleaned water. Once filtered, the healthful properties of the water are enhanced through natural alkalization and ionization.

Most contaminants are reduced to non-detectable levels in laboratory testing. In addition it greatly improves taste and odor giving you a great tasting and clean glass of water.

Only AlkaViva offers UltraWater Filtration Technology that removes most contaminants to non-detectable levels. (Rated for 1000 gals.)
