EXTERIOR SUN CONTROL
PRODUCTS

EXTERIOR SUN CONTROL PRODUCTS

Phifer's Exterior Sun Control Products absorb and dissipate 65 to 97 percent of the sun's heat and glare before it reaches window or door glass. Sun control screens keep living spaces cooler, helping reduce energy costs, and protect furnishings against fading while also providing daytime privacy.

All of the Phifer Sun Control screening products protect against annoying insects - just like conventional fiberglass screening - and offer good outward visibility. These energy-saving screening products are designed to enhance a variety of exterior building facades and are easily installed as window and door screens, enclosure screening or utilized in exterior roller shades.
