

Product Data Sheet
MICROBIOCIDE
9 1 1 0

DESCRIPTION

9110 is an aqueous solution of a neutralized hypochlorite solution. It is a strong oxidizing agent used in a variety of waste water, cooling water and cleaning applications.

APPLICATION

9110 is effective at oxidizing a wide variety of organic and inorganic contaminants in waste water streams and cooling towers. It reduces chemical and biological oxygen demand in waste water streams. It is also used to clean-up organically contaminated systems either alone or in combination with other chemical cleaning compounds.

PHYSICAL PROPERTIES

Color and Form Yellow Liquid
Specific Gravity 1.21
Density 10.2 lbs./gal.
Odor Chlorine

DOSAGE & FEEDING

9110 can be fed directly from the drum to the system or diluted with water prior to feed. The product does slowly degrade in the drum. To prolong its life, it should be stored in a cool area out of direct sunlight or used within 3 months for maximum effectiveness. Product dosage will vary depending on the application. Your Technical Consultant

should advise on the appropriate dosage.

HANDLING AND PRECAUTIONS

Avoid eye or skin contact and inhalation of vapors. Flush affected areas thoroughly with water, wear appropriate safety equipment with good ventilation. Please refer to Material Safety Data Sheet for additional safety information.

PACKAGING

9110 liquid is available in:
55-gallon drums - net weight 541 lbs
