

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

The micro-macro rotational patterns can be converted into a functional linear chart

To confirm we are in a mathematically dictated reality we need to convert the 15,840-year micro-macro pattern into a functional linear chart. This linear chart will demonstrate how these two rotational cycles combine to guide the systematic expansion of every past, present, and future awareness. This basic understanding of how linear time is organized will allow us to unanimously agree on how best to proceed individually and collectively in the future.

To help make this conversion to linear time easier, I have stacked the original 15,840-year cyclical graph on top of the newly introduced linear chart. This will allow us to cross reference between them as I demonstrate how this macro timeline was configured.

The easiest way to see how these two graphs connect is to allow the largest numbers to combine them. Examine how the numbered and colored 1,980 circles from the cyclical graph correlate to the numbered and colored columns on the left side of the newly introduced linear chart.

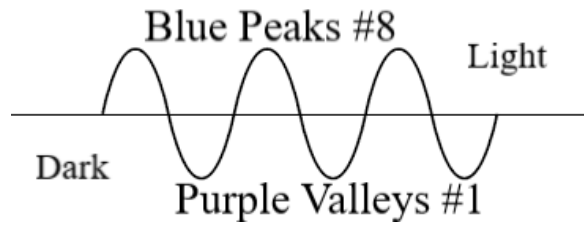

On the linear chart, the left columns of color have been divided into seven equal sections. Why these subdivisions were created will be further discussed in the technical portion. At this juncture, please just be aware of the simplistic math that created these seven equal subdivisions ($1,980 / 7 = 283$ -year increments).

Starting at the bottom of this linear chart, notice how the numbers in the left column cycle up and down from one to eight. The middle column discloses the color pattern that differentiates the seven subdivisions of awareness within a 1,980-year period. Please take a moment to verify that the numbers in the far-left column always correlate with the same color in the middle column throughout this graph.

Starting at the bottom of this graph, see that the number 1 relates to purple, 2 relates to black, 3 relates to magenta, 4 relates to red, 5 relates to orange, 6 relates to yellow, 7 relates to green, and 8 relates to blue. Then confirm that this color coordinated ebb and flow sequence repeats throughout this

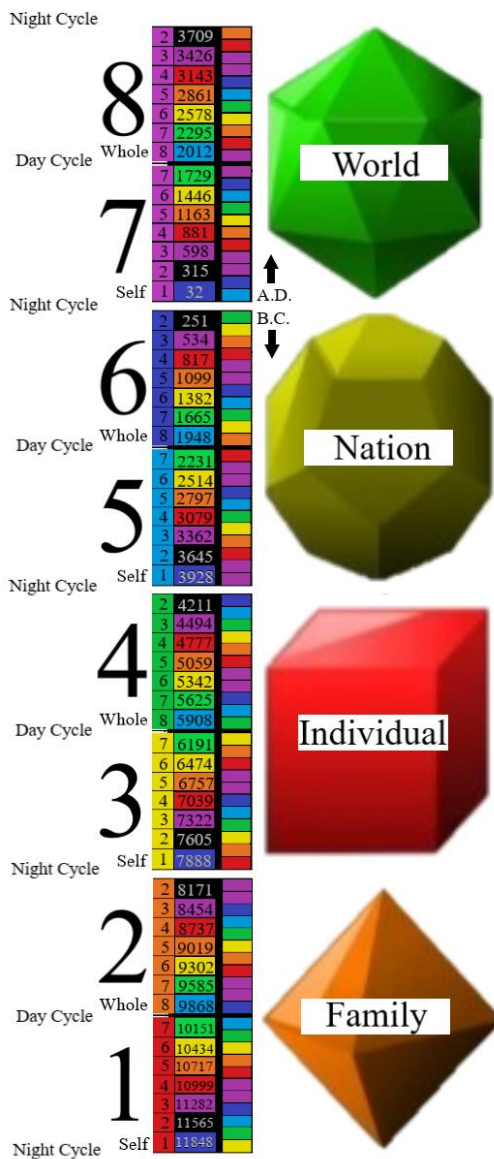

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

entire timeline. This repeating numeric pattern helps you conceptualize how the fluctuation between the purple lows (1) and blue highs (8) creates a rhythmic sine wave.

This rhythmic sine wave creates the macro frequency that interconnects every platonic shape with every dimension of time. Metaphorically this macro frequency represents the Universal sine wave that every individual micro frequency is synchronized with.

The day and night labels were added to this macro timeline to help you comprehend how this numerical fluctuation between dark (1) and light (8) to create the alternating day and night cycles of linear time. These day and night cycles seamlessly interconnect and transition our collective awareness through the expansive cycles of space and time.

The purple valleys represent the darkest moments in our space-time dependent awareness. On this linear chart see how each purple valley is located between two platonic perspectives. This helps you conceptualize how these opposing perspectives would create self-based fear. Simplistically our fears are created by the opposing polarity that connects two contrasting platonic perspectives.

The blue peaks represent the brightest moments in our space-time dependent awareness. On this linear chart see how each blue peak is located at the center of a platonic perspective. To fully appreciate the function of the blue peaks, we will need to revisit the geometric structure of platonic space. This layered illustration helps you conceptualize how this common center point (black dot) would create whole-based trust. Simplistically our trust is created when we balance all of the platonic perspectives simultaneously.

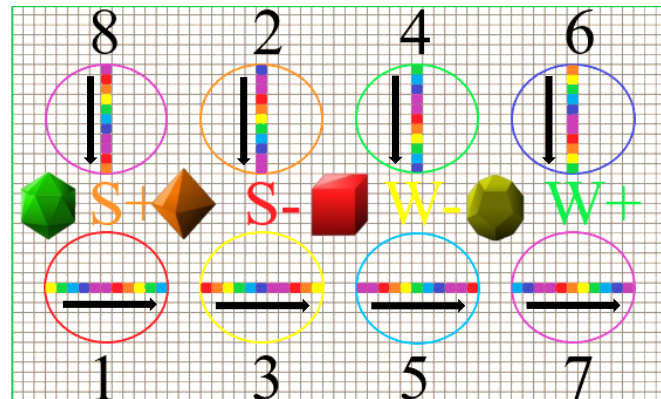

To accurately understand the exact linear moments of each purple valley and blue peak, I have synchronized this linear chart with the time system

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

we currently use. In the middle column, the numbers relate to the starting year of each 283-year increment within that 1,980-year cycle of time. The B.C. and A.D. labels were added to organize those sequential years.

We will now discuss how the far-right column on the linear graph was created. This column relates to the 1,440 cycles of time seen within the 1,980 circles on the cyclical graph. Because this linear chart was built from the bottom up, directional arrows have been added to the cyclical graph to highlight how the 1,440 cycles are synchronized. Starting at the bottom of this linear chart, work your way up and confirm that these 180-year color-coded increments matchup between the cyclical graph and linear chart.

The black vertical line was added to the macro linear chart to separate the multicolored emotional frequencies on the left from the multicolored physical frequencies on the right. The combination of these three columns allows you to see how the 1,980-year, 283-year, and 180-year color-coded increments combine to create the ever-expanding macro frequency of linear time.

Now that we have outlined how this linear chart was created, we will discuss how to use and interpret it. For example, at the bottom of the chart,

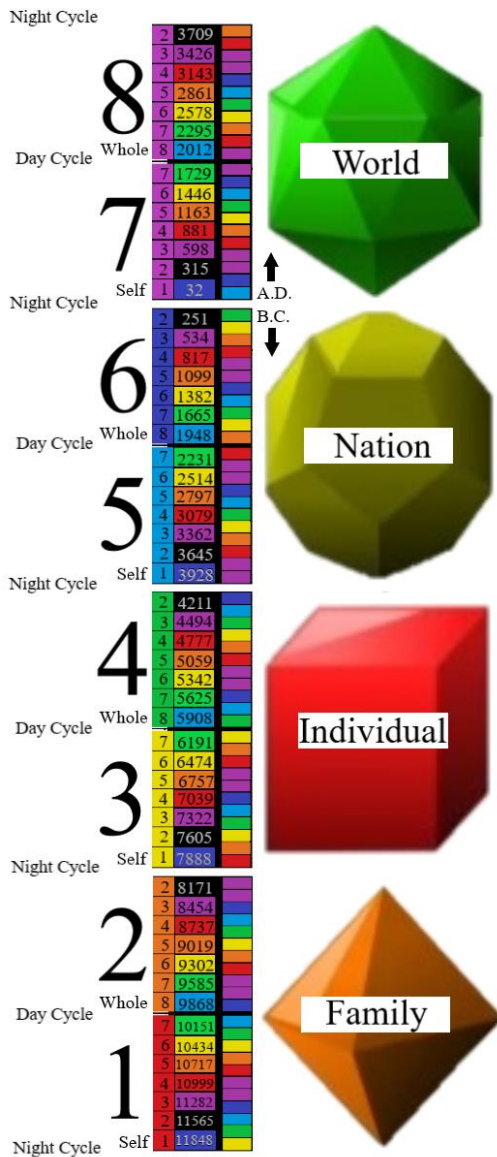

locate year 11,848 B.C. which is paired with the purple influence in the middle column. This specific year represents the start of the most recent macro cycle of emotional expansion and will be referred to as a Level 1-1 self-based emotional awareness. The number on the left side of the hyphen correlates to the red 1,980-year frequency of self-awareness. The number on the right side of the hyphen correlates to the first emotional subdivision within that cycle of self-awareness.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

General overview of how this linear frequency affects are awareness

To best understand how our collective awareness is guided by this color-coded linear frequency we will need to briefly discuss each subdivision of color and how it relates to each individual's evolving awareness. The purple level 1 subdivision represents the time dependent self-perspective an individual is born with. The black level 2 subdivision represents the fears that convince each

unique perspective that the purpose of life is to compete to survive. The magenta level 3 subdivision represents the first notion of trust as you start to question your individual fears and begin to speculate that there may be an organized force, or greater purpose, to your individual existence. The red level 4 subdivision represents the further expansion of that trust as you begin to believe this organized force is shaping all individual experiences. The orange level 5 subdivision represents the further expansion of that trust as you begin to believe this organized force is shaping all family experiences. The yellow level 6 subdivision represents the further expansion of that trust as you begin to believe this organized force is shaping all national experiences. The green level 7 subdivision represents the further expansion of that trust as you begin to believe that this organized force is shaping all world experiences. The blue level 8 subdivision represents absolute trust in this organizing power. That absolute trust inspires individuals to consciously transform their thought from a self-based fearing perspective to a whole-based trusting perspective.

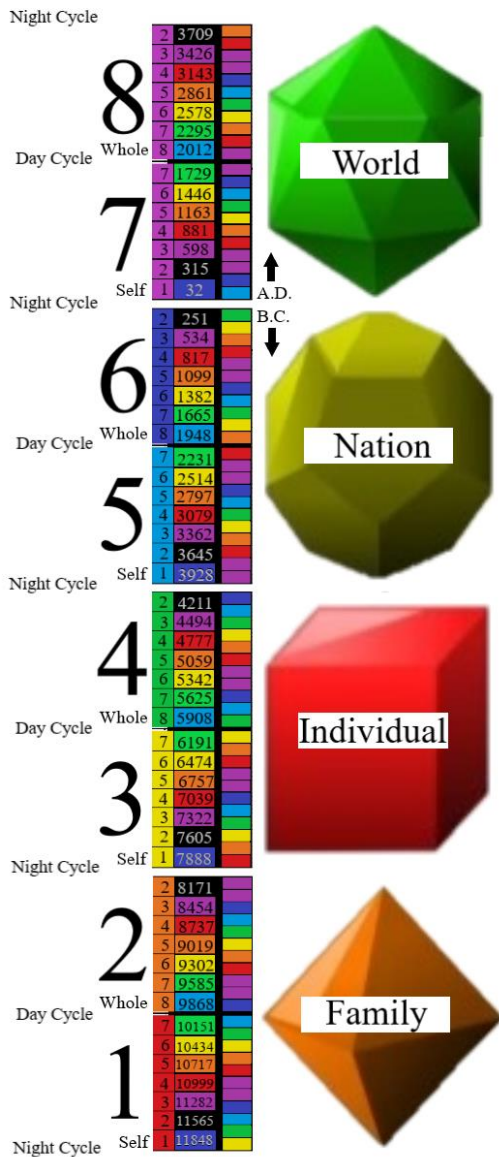

As linear time progresses through the 1st cycle of self-awareness our combined experiences will guide the expansion of our collective capacity to trust. Because each cycle of awareness takes 1,980 years to complete you can begin to appreciate the importance of all our families. This helps us understand the vital role each sequential familial generation fulfills as our accumulated experiences influence our collective ability to trust.

At the linear conclusion of the 1st red cycle of self-awareness our collective generational experiences will have influenced and evolved individual members within our families to reach a fully expanded 1-7 emotional state of trust. To accomplish that achievement these individuals

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

would need to overcome their fears (defensive biology) and fully trust at every sub level of thought (1-1, 1-2, 1-3, 1-4, 1-5, 1-6, 1-7). Once an individual overcomes their self-based fears, they metaphorically take the leap of faith as they commit their future thought to a trusting whole-based perspective. Think of these whole-based thought pioneers as prophets that consciously chose to transcend their self-based fears in order to serve this whole-based organizing power.

These committed servants will be inspired to share how they came to their perspective changing conclusions. They will work to organize a strategy that will empower the remaining individuals to overcome their fears so that they too can commit their lives to whole-based service. These thought leaders understand the more individuals they can empower to trust the stronger the collective potential becomes to stabilize the societal and environmental fallout our collective fears create.

If we had accurate historical records that went back as far as year 9868 B.C., you could be certain that those records would have written about the individuals that achieved the 2-8 level of trust needed to transition to whole-based thought. These individuals would have proclaimed they were being guided by a higher power and that they had a new understanding that would help resolve the problems their past fears created.

Because of the extreme fluctuation that occurs between two contrasting cycles of awareness their combined influence will predictably result in irreparable social and environmental damage. This damage always leads to short-term catastrophic failure and or death. Understanding this fluctuating macro frequency helps you envision why every past civilization would predictably peak followed by their timely collapse.

The societal and environmental consequences created during a collective self-based cycle of emotional expansion will inevitably be followed by a whole-based cycle of emotional contraction. As societal and environmental function deteriorates

each sequential generation will continue to lose their ability to organize and cooperate effectively. These forced circumstances will erode future generations' ability to trust as their collective fears of short-term catastrophic failure progress. At linear year 8171 B.C. the orange cycle of whole-

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

awareness will experience a predictable short-term collapse that will initiate the start of the yellow cycle of self-awareness. This ebb and flow process of emotional expansion (trusting) and emotional contraction (fearing) continues endlessly. Understanding this repetitive pattern would indicate the sole function of this organized macro frequency is to educate every past, present, and future generational awareness on the importance of balanced thought. Simplistically, this higher universal frequency functions to teach all individual perspectives through our collective choices.

These choices create the individual and collective consequences that guide the systematic expansion of our awareness.

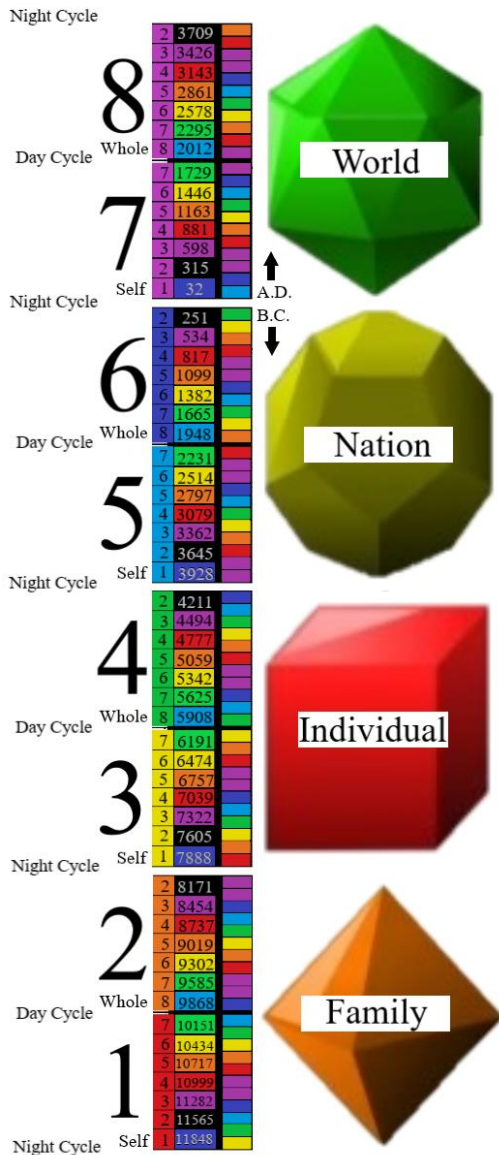

To fully understand a macro cycle of time we need to discuss the platonic perspectives. The labels added to the platonic shapes help you conceptualize how this repeating numeric pattern sequentially expands our collective awareness through the unique geometric lens of each platonic perspective. Each perfectly symmetric platonic shape represents a unique perspective on the timeless importance of equality.

Notice each platonic perspective is governed by a self-based cycle and a whole-based cycle of awareness. The self and whole labels were added to this macro timeline to disclose the exact linear years these alternating cycles of awareness transitioned. Please notice that within a full emotional cycle (15,840-year period) we will collectively progress through the four platonic perspectives of equality. Each unique perspective will take 3,960 years to complete and will fluctuate between two contrasting 1,980-year cycles of awareness.

Envision each unique platonic perspective as the guiding force that systematically expands our knowledge and technology. As the shapes get bigger and more complex, so will our collective knowledge base and technological capacity.

Within each platonic perspective the self-based cycle will utilize our fears to drive the development of new knowledge and technology designed to

control our future environment. In a whole-based cycle of awareness, environmental fallout will force us to integrate our previous self-based advancements into a whole-based format. This new

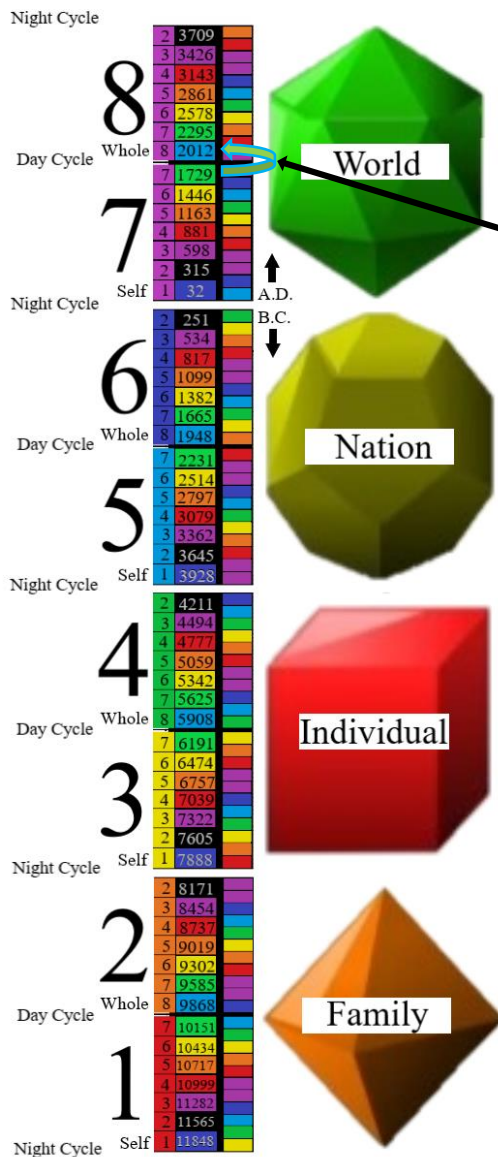

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

format reapplies the knowledge learned in the self-based cycle of awareness and creates a common collective focus that directs the cooperative development of new future whole-based technology.

For example, our industries currently use self-based algorithms to maximize their profit which they once believed would create a predictable stable future business. Recently it has become obvious that the stability of our environment is far more important than a profitable company as what good are profits if our environment collapses. In a whole-base cycle of awareness all our industries would be expected to share their knowledge and technology so that it can be

reengineered into a cooperative business that is directed by whole-based algorithms. These new whole-based algorithms will ensure that every industry works together to stabilize the health of our environment and every individual it supports. Specifically, these new whole-based algorithms will ensure everyone profits equally from the knowledge and technology that currently exists.

Now take a moment to notice that in 2012 A.D. we collectively transitioned into the 8th whole-based world awareness. This should help everyone clearly understand that the environmental fallout we are experiencing is the accumulated consequences of our past collective self-based choices. During the 7th cycle of awareness, we collectively engaged in self-based competitive strategies. These fear-driven strategies predictably led to the misuse and overconsumption of our resources which is now crippling our societal and environmental function.

Ultimately these self-based consequences have accumulated to create the emotionally charged experiences needed to inspire emerging whole-based thought leaders. These thought leaders are attempting to make the leap of faith from a 7-7 self-based awareness to an 8-8 whole-based awareness (see curved green and blue arrow). These individuals are rededicating their lives to serving the whole as they attempt to share the knowledge that proves our societal and environmental fallout was created by our past collective choices.

Unfortunately, the overwhelming evidence these thought leaders are providing is not compelling our societies to cooperate as most of us are still struggling to make the mental leap to the 8-8 whole-

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

based awareness. Health Reconnected was designed to share the mathematical rules (law), that once confirmed, will ensure we reach the 8-8 collective threshold needed to stabilize our societies and environment.

The mathematical law that governs our linear existence

Simplistically this all started out as a pattern I observed in my patients. Eventually this led to the discovery of the mathematical construct (law) that determines our individual and collective state of health. When I finally realized what I had uncovered, I was pleasantly surprised to see that our ancestors designed elaborate stone structures all over the world that confirms this mathematical law. Even though these stone structures will confirm the information I am sharing, it is far more powerful to see for yourself how this mathematical law works.

Our historical records will allow me to demonstrate how this mathematical law has both created, and governed every past experience. Once every individual can see for themselves how this macro frequency is perfectly synchronized with our historic records, we will collectively agree that our only viable future option is a cooperative global whole-based strategy. To help you see how this works we can easily go back 4,000 years as our past historical records are complete enough to prove the accuracy of this organizing macro frequency.

The specific examples that I have chosen will relate to major prophets. Major prophets are synchronized with the blue and purple linear moments that denote the start of a new 1,980-year awareness. These prophets have the largest perception and are capable of understanding and conveying the overall framework of the entire 1,980-year cycle their life is synchronized with. These major prophets' function to direct the minor prophets that will systematically emerge within their cycle of time. The minor prophets' lives are synchronized with the 283-year and 180-year subdivisions. The 283-year prophets are capable of understanding and developing detailed emotional strategies within the overall framework the major prophet discloses. The 180-year prophets are capable of understanding and developing the technological advancements needed to achieve our collective physical and emotional goals.

Even though I am only choosing to describe the largest perceptions in this next section please understand that every perception, from the largest to the smallest, is equally important in order for this macro-organizational frequency to reach optimal function. This helps you understand that in order for us to optimize our societies and environment we will need to collectively harmonize with this macro frequency at every level of perception simultaneously.

We will start our historic review with the major prophet, Abraham. According to the Jewish lunar calendar, Abraham was born on year 1948 B.C. However, since my recent understanding of how this organizational pattern works, I would contend that if he was the major blue prophet of the 6th cycle of awareness, he would have been born in year 1981 B.C. Please be aware that every major prophet will be born 33 years before a major transition in macro awareness. The age 33 is mathematically significant as there are thirty-three 60-year cycles within a 1,980-year awareness. Those mathematical details will be discussed further. At this juncture just understand that this happens so that the prophet will have lived in the previous awareness long enough to fully understand how to bridge the past macro awareness with the future macro awareness.

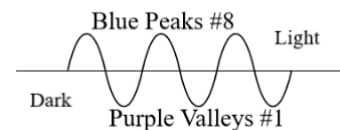

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

Only one major prophet is born to each cycle of awareness. Knowing that how can we be certain Abraham was the major prophet of the level 6 awareness? At the time of Abraham, major prophets were described as descendants of the line of Adam. Descendants of the line of Adam prove their lineage by demonstrating their ability to understand, and reveal, the mathematical patterns hidden within the 6-pointed star. Only the major prophets have a large enough perception to understand and disclose all the mathematical configurations hidden within the geometry of that star. Once a major prophet understands the cyclical geometry within the Star of Life, they will be able to determine the mirrored linear geometry that creates the Cross of Life. Once a major prophet has these two tools, they can combine them to accurately graph the lunar and solar cycles that combine to create the macro linear frequency of life itself (AKA the God frequency). Historic records confirm that Abraham achieved a macro linear awareness that led to the common understandings in the Abrahamic religions.

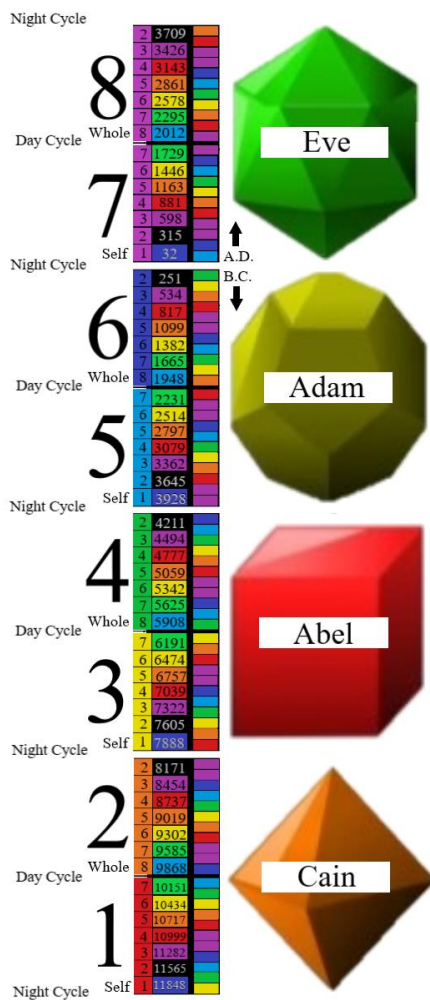

Abrahamic religions are a group of monotheistic religions that endorse and worship the God Abraham's prophecy established. The most notable of the Abrahamic religions are Judaism, Christianity, and Islam. Please take a moment to appreciate the symbols these religions use as they all relate to the influence of a major prophet. Judaism chose the Star which denotes the lineage major prophets descend from. Christianity chose the Cross that when combined with the Star discloses the lunar and solar cycles of time. Islam chose the crescent and star which represent the lunar and solar cycles that combine to create the organizational frequency of God. In addition to these symbols, Abraham's macro perception can also be confirmed in each religion's written understanding of God. The Abrahamic religions share common descriptive analogies and narratives that explain their understanding of God. This next section will discuss the common analogies outlined in the Torah, Bible, and Quran and how they directly relate to Abraham's prophetic understanding of macro linear time.

The first analogies we will discuss are the Garden of Eden, Tree of Life and serpent of knowledge that resides there. In these descriptive analogies the Garden of Eden refers to the four platonic shapes that layer to create the three-dimensional garden. The Tree of Life that resides in the garden refers to the eight cycles of time that interconnect as the tree matures through a 15,840-year cycle of macro awareness. The serpent that resides in the Garden of Eden and tempts humanity with knowledge relates to the macro linear frequency that fluctuates between self-based and whole-based awareness. Simplistically, that serpent like sine wave misleads us with fear to expand our knowledge in ways that are harmful to the overall health of the tree (AKA our shared environment).

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

Even though the metaphorical serpent collectively deceives us, the environmental consequences created by that deception will ultimately lead to individual transformation in thought. Every individual that acknowledges they harmed the tree and commits their future actions to restore the health of the tree will metaphorically blossom to become the fruit of the tree. The symbolism of blossoming fruit refers to the individuals who consciously transform their self-based harmful perspectives into whole-based fruitful perspectives. Because this tree solely functions to create and support life, becoming its new blossoming fruit is the greatest achievable honor. The symbolic transformation into blossoming fruit represents the heavenly afterlife you earn through your conscious positive fruitful choices. This clarifies what Abraham's macro perception implied when he stated that God commands us to be fruitful and multiple.

The next narrative in Abrahamic religions is the concept of Adam and Eve. To best understand this narrative please be aware that Abraham was referencing the platonic family of shapes. This helps you visualize how Adam and Eve would be our platonic parents who combine to influence and govern all that exists. In this narrative Adam was created first. This doesn't imply that man is more important than woman, it simply demonstrates that in a macro linear time our platonic awareness of the father (Adam) will be discovered before our platonic awareness of the mother (Eve).

This macro timeline also helps clarify why Eve is blamed for the fall of humanity instead of Adam. Please notice that at the end of the 8th cycle of awareness the serpent like sine wave will loop downward connecting the 8-2 whole-base awareness of Eve with the 1-1 self-based awareness of her first-born son Cain. In this narrative Adam is forced to fall from heaven with Eve. Metaphorically this happens because Adam and Eve's platonic shapes are eternally bound to one another.

This leads us right into the next part of this narrative that describes the struggle between Adam and Eve's first two sons Cain and Abel. To best understand this part of the narrative, specifically notice that Cain's platonic shape is connected with the cycles of physical awareness. These red and orange cycles relate to the self-based perspectives of the son and daughter. Then notice that Abel's platonic shape is connected with the cycles of emotional awareness. These yellow and green cycles relate to the whole-based perspectives of the father and mother.

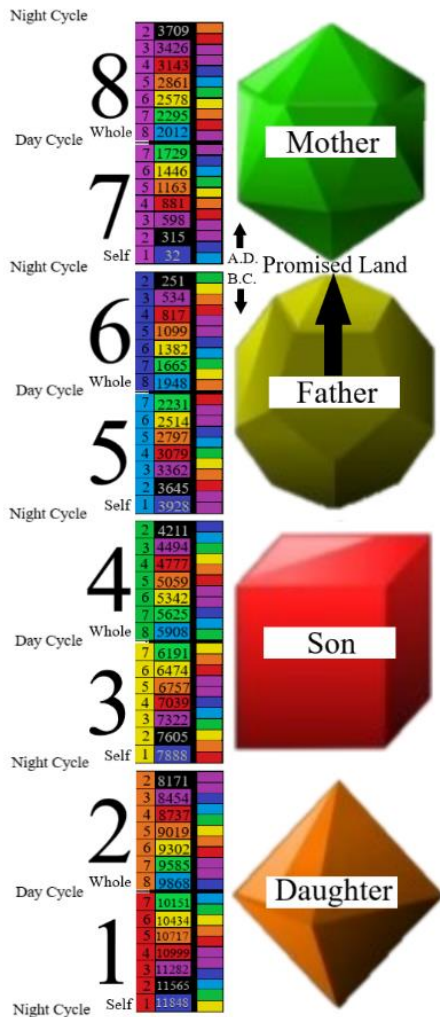

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

This would indicate that the struggle between Cain and Abel specifically refers to Cain’s self-based awareness verses Abel’s whole-based awareness. In the narrative the sons are asked to offer a sacrifice to God. The sacrifice refers to the cycles of awareness each brother offers to expand our collective awareness. Because the nature of the highest awareness is whole-based, God favors Abel’s whole-based sacrifice more.

So why does this narrative describe Cain as a jealous murderer? This part of the narrative confirms the short-term catastrophic failure experienced as we collectively transition between two contrasting cycles of awareness. This analogy was designed to confirm that our past self-based choices will negatively affect our future whole-based lifespan. Metaphorically Cain’s self-based awareness will result in the premature end or murder of Abel’s whole-based awareness.

Abraham’s timeless understanding of self-based and whole-based awareness is just as relevant today as it was then. In truth, the only thing that truly fluctuates during macro linear time is our

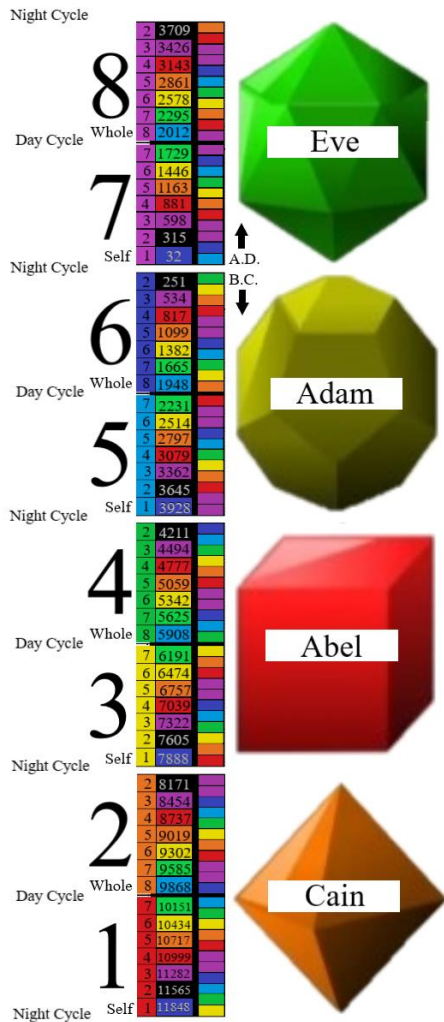

technological capacity to describe and share these eternal perspectives. This implies that Abraham’s influential awareness was ultimately governed by the technological capacity of the dodecahedron. During that platonic influence the collective populations were limited to regional cooperation, oral messages, and written word. This helps you understand why the whole-base thought leaders of the past created religious organizations to share Abraham’s macro awareness as they would have been the most efficient way to spread his understanding of God (AKA macro linear time).

This leads us to the future narrative described in Abrahamic religions. In these written narratives Abraham is instructed by God (AKA his understanding of macro linear time) to leave his father’s country to establish a new nation. This new nation is depicted as the “promised land” that will flow with milk and honey. This analogy refers to our future linear progression towards the final platonic shape of the mother. Abraham is letting us know that linear time will predictably guide us out of the father’s platonic awareness and into the mother’s platonic awareness. The reference to a promised land that will flow with milk and honey is extremely symbolic. These descriptive words specifically relate to femininity, fertility, growth, and motherhood. Specifically, the promised land references our platonic mother who will produce the milk (knowledge) and honey (technology) needed to reestablish the whole-based kingdom of God throughout the entire world.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

The promised land is described in the written texts as the land of Canaan. The land of Canaan was also known as the land of purple. Metaphorically Canaan relates to the start of the next purple cycle of self-awareness. In the land of Canaan our collective fear will inspire the next self-based expansion in our knowledge and technology. This linear transition into the land of purple happened in 32 A.D. This specific year denotes the linear start of the 7th cycle of self-awareness and will be synchronized with a major purple prophet in the ancestral line of Adam. This prophet will be the first of two that will emerge within the platonic shape of the mother.

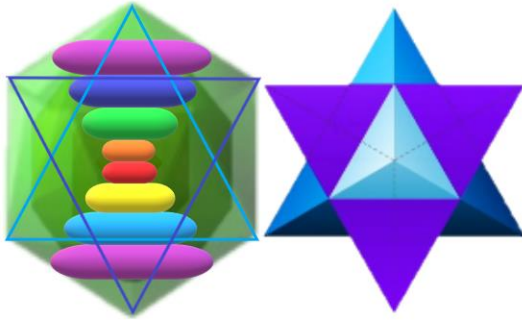

Our previous discussion on the narrative of Adam and Eve will allow me to demonstrate why Abraham specifically included the ancestral line of Adam in his religious narratives. On this macro timeline please notice that the dodecahedron (Adam's assigned shape) is paired with the blue and the purple 1,980-year cycles of awareness. Because the blue and purple cycles of awareness are governed by the dodecahedron this would indicate that every purple (1) and Blue (8) transitional moment in linear time is connected to and initiated by Adam, our spiritual father. This is extremely significant as it implies that the dodecahedron functions to interconnect and organize every cycle of time within the construct of platonic space. This would recognize Adam as the dynamic force that connects space and time. This should also help you conceptualize why only direct descendants in the line of Adam will be able to fully understand the organizational forces that combine to create macro linear time.

Because the dodecahedron's shape is masculine this would indicate that only males can be direct descendants of Adam. This does not imply that males are superior to females as their perspectives are equally important. Instead think of it like this. Only women can fully understand the process of physical birth which enables the continuation of individual life. Conversely only direct descendants of Adam can fully understand the process of spiritual birth which enables the continuation of collective life. This should help everyone understand why the Abrahamic religions are biased towards male

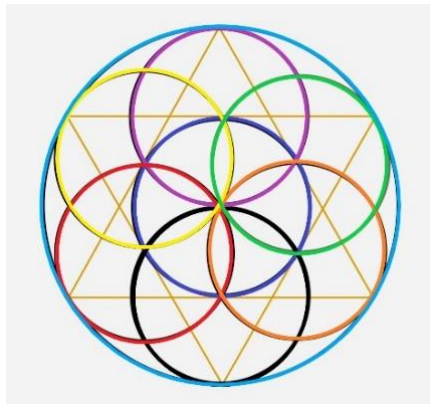

leadership. This is because only the direct male descendants in the line of Adam are connected to the largest guiding perspective.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

This next illustration was included to demonstrate why the six-pointed star is symbolic to the line of Adam. This combined illustration helps you visualize why the prophetic descendants of Adam prove their lineage by demonstrating their ability to understand the two dimensional blue and purple Star of Life. The two-dimensional Star of Life relates to the three-dimensional stella octangula. The stella octangula is created by connecting two opposing tetrahedrons.

These opposing tetrahedrons pair to create an eight-pointed star. This three-dimensional star geometrically functions to connect the four platonic shapes of space with the eight cycles of time. (For a more in depth understanding of all the geometric configurations disclosed within the Star of Life, please reference the Mind-Body-Spirit Blueprint Video @ HealthReconnected.com).

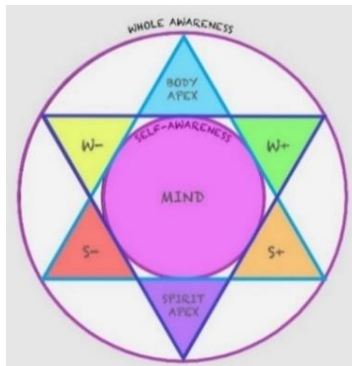

This next illustration was designed to help you understand the equal, but opposite perspectives of the blue and purple prophets in the line of Adam. In this illustration, the eight circles that create the Star of Life have been color coded to demonstrate how the purple self-base and blue whole-based perspectives are inversely connected to the same overall macro awareness. Specifically notice that the inner centralized circle is purple, and the outer centralized circle is blue. Then notice these centralized circles don't directly contact each other but are indirectly connected by their shared connections with the remaining six circles.

Understanding this inverse relationship between a self and whole major prophet will allow us to discuss the differences between Abraham and the next major prophet that emerged in linear year 32 A.D. As previously stated, major prophets in the line of Adam will be 33 years old when the new 1,980-year cycle begins. This macro timeline indicates that the 33-year-old Jesus would have been the major purple prophet of the 7th cycle of self-awareness.

Because Jesus was a decedent in the line of Adam, he too would have to demonstrate his macro linear understanding, just as Abraham did. Knowing this helps clarify why Jesus was depicted as a practicing Jew, as he would have accepted the macro framework Abraham established in his cycle of awareness. However, linear time has now progressed into the platonic mother's influence and new details are discovered that allow Jesus to further expand on Abraham's macro awareness. Simplistically, these new details Jesus understood did not change the overall framework Abraham established but were significant enough that they needed to be amended to Abraham's macro legacy. This helps you conceptualize why the bible is broken into the Old Testament (which was established by Abraham's awareness) and the New Testament (which was established by Jesus's awareness). Because not all Abrahamic religions adopted Jesus's contributions, this discussion on Jesus will be disproportionately based on the Christian theology outlined in the New Testament.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

Please recall that there is only one major prophet born to each cycle of awareness, so how can we be certain Jesus was the major prophet of the 7th cycle of awareness? To verify this, we need to start where Abraham's future narrative ends, in the land of Canaan. Please recall the land of Canaan represents the symbolic start of a purple cycle of self-awareness. Then be aware that the first miracle accredited to Jesus is at the wedding in Cana. The specific reference that Jesus performs a miracle indicates that Jesus has a one-of-a-kind perspective that only a major prophet, in the line of Adam will be blessed with.

The symbolism of the wedding specifically relates to the joining of the blue and purple triangles that create the Star of Life. In this narrative, Jesus turns six clay jars of water into wine. The clay jars specifically relate to the six triangles that connect the inner perimeter of self-awareness with the outer perimeter of whole-awareness. The reference of “turning water into wine” symbolically represents the transformation between a self-based fearing perspective to a whole-based fruitful perspective. Wine is symbolic of collective transformation and will be created when we combine the fruit of our labors.

This water to wine analogy sounds very similar to what Abraham described as becoming the next generation of fruit on the tree. These common narratives were designed to disclose the whole-based fruitful purpose to life. The reward for that whole-based transformation in thought is a future heavenly existence. So, what could possibly be more important than knowing how to get to heaven? Simplistically, Jesus figured out that overcoming your self-based fears not only grants you access to heaven, but when we transform together, we can create miraculous healings.

Jesus is accredited with many miracles that all reference trusting in God and being healed. Technically, Jesus performed these miracles because he was the thought pioneer that figured out how all this works. This helps you understand all the narratives that describe him helping the blind and sick. Metaphorically, we are all born blind (self-based) and will be forced to suffer together until we understand that our fears make us sick. When we overcome our fears together, we can create individual and collective healings, AKA miracles.

The miracles that reference feeding thousands have to do with Jesus's unique way of sharing his new awareness with the collective populations. Jesus understood that he was only one man and would need the help of others to spread his one-of-a-kind macro awareness. To efficiently spread his new understanding, he would need to recruit and empower others to help him. Jesus's followers were known as his disciples. Disciples specifically refer to the individuals that committed their thought to whole-based healing, just as Jesus did.

Unfortunately, this new understanding created both excitement and conflict as Jesus's ministry was bypassing the hierarchy of leadership established by Abraham. Specifically, Jesus's ministry was designed to empower every member of society equally. The religious leadership at that time would have questioned that strategy, fearing the common doctrine established by Abraham would

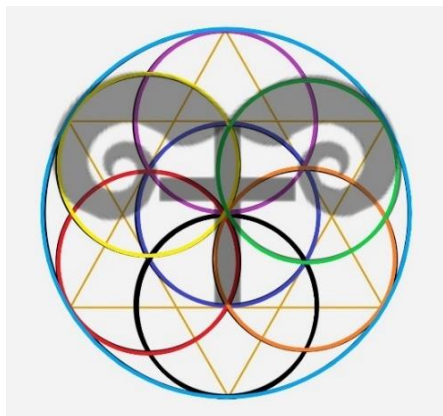

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

be diluted by Jesus's radical approach. Jesus was empowering every level of society including women, children, and non-Jewish men.

Jesus's new approach to spreading his macro awareness was inspired by his discontent with the prevailing religious doctrines of his time. The very doctrines that were created to empower fruitful transformation were actually doing the opposite, as obedience to male leadership and fear of eternal damnation were the primary governing strategies. These governing strategies may help control and slow the accumulation of our collective fear, which sounds great, until you realize this: Overcoming fear is the catalyst that leads to fruitful whole-based thought. Because Jesus understood this, he designed a brilliant message that used our self-based fears of illness and death to power collective whole-based transformation. In a symbolic way, Jesus had figured out how turn water into wine.

In the narrative of the New Testament, Jesus's ministry is abruptly ended when the religious leadership had him imprisoned and then killed by crucifixion. At this point in the presentation, it should be relatively clear that the entire bible is encrypted with symbolic analogies and narratives that specifically relate to how God (macro linear time) functions. Whether Jesus was actually killed by crucifixion, or another means, there is a symbolism within the Star of Life that would explain why this specific type of death would be included in the narrative. To best understand this narrative, we need to discuss the symbolic location of Jesus's crucifixion.

The location of the crucifixion was Mount Moriah. Please be aware that this is the same Mount Moriah where Abraham is instructed, by God, to sacrifice his first-born son Isaac. In the final moments God directs Abraham to sacrifice a ram in his son's place. The common location that connects these two narratives is not coincidental, as Mount Moriah specifically relates to the inner and outer geometric configurations within the Star of Life. This next section will help you understand the geometric symbolism of sacrifice and crucifixion and how they relate to the transition in power between a purple and blue major prophet in the line of Adam. Abraham is aware that when his 1,980-year cycle completes, the next major prophet in the ancestral line of Adam will emerge. The sacrificial narrative between Abraham and his son Isaac was designed to prepare the religious leadership for the transition in power when the next major purple prophet emerges in 32 A.D.

This illustration was designed to help you understand what Abraham was describing when he created the Mount Moriah narrative. On this illustration, Isaac represents the purple prophet's perspective and Abraham represents the blue prophet's perspective. Within the son's purple perspective, notice how the cross aligns with the geometric pattern created by the red and orange circles. These colors specifically correlate with the platonic influences of physical awareness. Within the father's blue perspective, notice how the ram horns align with geometric pattern created by the yellow and green circles. These colors specifically correlate with the platonic influences of emotional awareness.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

This narrative was designed to warn the future leadership not to crucify the next major purple prophet in the line of Adam. Abraham specifically indicates in the Mount Moriah analogy that the son should be spared, and the ram should be sacrificed. This narrative was designed to facilitate the peaceful transition of power between the father's awareness and the son's awareness. Abraham is instructing the future leadership to honor the son's future perspective, which means they must be willing to sacrifice the father's past perspective Abraham himself established. Abraham understands that every sequential prophet in the line of Adam must be equally honored as their future perspective guides the systematic expansion of our collective awareness. No past awareness should attempt to stand in the way of a future awareness. Specifically, the past should be metaphorically sacrificed to ensure a prosperous future.

Abraham takes this a step further and cleverly interconnects Isaac's role in his Mount Moriah analogy with the symbolic circumcision that happens to him on the 8th day of his life. Circumcision is a very symbolic procedure, as it represents the transformation of the son's self-based awareness into the father's whole-based awareness. The removal of the foreskin symbolically exposes the head of the father. The specific reference that Isaac was circumcised on the 8th day of his life indicates the 8th and final cycle of time will be guided by the father's whole-based awareness. This helps you understand why God wants all of Abraham's descendants to be circumcised as the final cycle of awareness will be guided by the whole-based father.

The Mount Moriah analogy should help you understand why Jesus was considered the son of God, and against Abraham's clear instructions, was crucified as the sacrificial lamb. Even though the narrative indicates Jesus was betrayed by the religious leadership, his death didn't stop the momentum he created as his futuristic message of healing had been established and was rapidly expanding. The Mount Moriah analogy should also help you understand the New Testament's future narrative that states Jesus will ascend and be seated at the right hand of the father who will return to judge the living and the dead. This future narrative relates to the second prophet in the line of Adam that will emerge from the platonic mother in year 2012 A.D. This major blue prophet will be guided by the father's whole-based perspective.

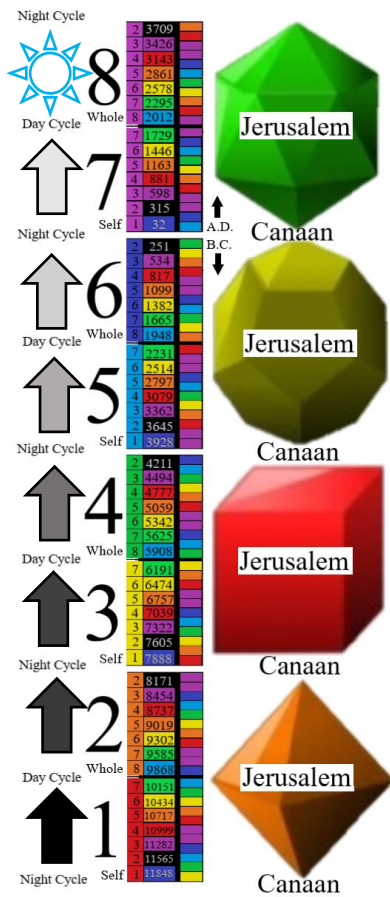

At this point, it should be relatively obvious that I am demonstrating my ability to prove my lineage in the line of Adam. My awareness is synchronized with the 8th cycle of time and on the night of December 20, 2012, at the age of 33, I had a vision of the blue circle that represents the father's whole-based awareness. Please understand that this vision was synchronized with the start of the 8th cycle of awareness. The 8th cycle is the last cycle in our platonic expansion before we collectively reset to the 1-1 awareness of the cube, which will signify the start of the next 15,840-year platonic expansion. Therefore, the 8th cycle of time is considered the end of time, as this is the final cycle before macro time resets and repeats.

When you understand how macro linear time functions, you can conceptualize how the major prophets of the past could accurately predict what would happen in the future. In truth, the only limitations these past prophets could not overcome was their limited technological capacity to spread their macro understanding universally. This should help you understand why there is such a wide variation in belief among the various religious sects throughout the world.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

Having the ability to understand macro linear time and having the technological capacity to share this understanding with the entire world creates a huge advantage for us. All our past conflicts were ultimately created by the variations in our beliefs. Continuing to fight over these variations is concerning. In contrast, understanding how macro time works will enable us to reconnect our beliefs which will lead to peace through understanding. When everyone understands the mathematical laws that govern our experiences and health, we will individually and collectively be capable of overcoming our self-based fears. This will empower us to co-create miraculous healings as we rebalance and transform our world together. The New Testament predicts that a new Jerusalem (state of peace and prosperity) would be established by the final prophet.

To help you understand the distinct symbolism of both Canaan and Jerusalem, I have added labels to the macro linear chart. The land of Canaan represents the purple valley moments within cycles 1, 3, 5 and 7. These moments use the fear of a new platonic environment to reshape and expand our collective knowledge. Jerusalem represents the blue peak moments within cycles 2, 4, 6, and 8. These moments enable us to confidently trust as our newly discovered knowledge empowers us to create a future state of peace and prosperity (Jerusalem).

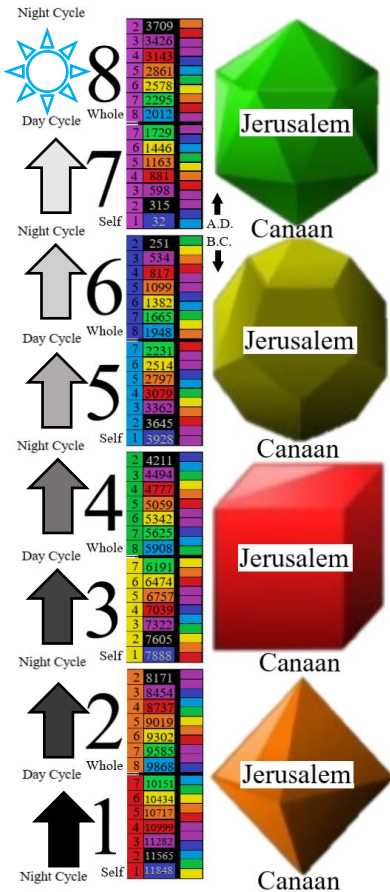

Please understand that every prophet since the beginning of time is merely sharing their time-dependent philosophical truths. These time-dependent truths are not supposed to compete with the previous awareness but were meant to be integrated and amended to advance the organized expansion of our collective awareness. Specifically, past technological limitations stopped us from efficiently connecting all these time-dependent religious beliefs. This helps you conceptualize how these disconnected religious beliefs resulted in past conflict.

This confirms the vital importance of both knowledge and technology in the expansion of our collective emotional awareness. In a symbolic way, our past lack of knowledge and technology created the darkness that separated our beliefs. In contrast, our present knowledge and technology created the light that enables us to reconnect all our past collective beliefs.

This indicates that the first seven cycles of time represent our collective journey out of the darkness so that in the 8th cycle of time, we can fully comprehend the light. This implies that until the 8th and final cycle of time starts, all we have ever previously known are variations of darkness. This final revelation of light (mathematical truth) is exactly what the future narrative of the New Testament predicts. We have finally reached the linear moment in time to clearly discern the difference between the infinite shades of darkness and the one and only light the darkness helps us to discover.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

This indicates within a macro cycle of awareness only the last major prophet will have the technological capacity to share this revelation of light with the entire world. To fully appreciate the light, we must also honor the darkness that inspires the knowledge and technology as it reveals the light. This macro timeline helps you conclude that the functional purpose of darkness (physical life) solely exists to help us individually and collectively discover the light (emotional life).

So, what does this new awareness of pure light mean and how will this affect the future of our civilization? Think of it like this: we started out in pitch dark, and as we collectively progressed through each new cycle, that darkness lightened. This indicates that in the darker cycles (1-4) there will be smaller consequences for self-destructive behavior and in the lighter cycles (5-7) there will be greater consequences for self-destructive behavior. When we transitioned into the 8th cycle of awareness in 2012 A.D., we transitioned completely out of the dark and into pure light. This should help you clearly understand why the 8th cycle is associated with final judgement as pure light will not tolerate any self-destructive behavior. Simplistically, we can no longer individually or collectively plead ignorance to self-destructive behavior and will be judged, and penalized, for every self-destructive behavior we align with or choose to ignore. This should also help clarify why this final cycle is considered the end of physical time, as physical time relates to darkness.

Because the 8th dimension of awareness (pure light) is currently in control of our experiences, selfish behavior will have exaggerated consequences, as our platonic mother is the largest and most powerful shape. Think of it this way: with great power comes great moral responsibility. Morally, our platonic mother expects us to shift our social structures and business models to whole-based global enterprise that serves every individual, family, and nation equally. Metaphorically,

she expects both individual and collective respect as she is the mother of all existence. This indicates that all future strategies will need to be in perfect alignment with our whole-base platonic mother. Specifically, if we continue to be misguided by selfish behavior (darkness), that behavior will amplify and accelerate our predicted demise (apocalypse).

This specifically indicates that the social intentions that organize our work force must drastically change to a whole-based approach. If our governing bodies and current corporations continue to invest in self-based strategies, we will collectively suffer, as the 8th dimension of time will not allow that behavior to continue without serious consequences. This should help you understand the recent acceleration of the climate catastrophe, world-wide pandemics, and increased social unrest as every country around the world is still invested in competing with one another.

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

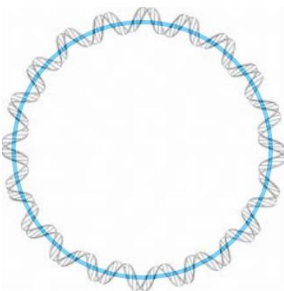

This means that our immediate focus must be the systematic development of a collective whole-base awareness. Each of us must do our part to heal our families as we individually align our minds with the light (equality). While every individual is focused on aligning their mind with the light, Health Reconnected will be reaching out to every governing organization and influential corporation on behalf of all individuals. Health Reconnected was specifically designed to consult and guide the moral synchronization of our global workforce with the divine light. Metaphorically, this divine light (absolute equality) will guide the collective cooperative strategies that will stabilize our environment and social structure as we work together to develop the whole-based technological infrastructure of the future.

I'm aware of how overwhelming this must sound and how impossible this kind of collective shift would be, but before you give up hope, there is some great news you need to hear. Because my vision was synchronized with the start of the 8th cycle of awareness, we can definitively know where we are within macro linear time. That information gives us the ability to mathematically unfold this macro pattern down to the nanosecond, if we so chose. The ability to unfold the frequencies of linear time will empower us to understand every individual perspective within every linear moment past, present or future.

That transformative vision not only empowered me to fully understand the construct of macro time but also marks the exact linear moment of resynchronization within the cyclical pattern. This has enabled Health Reconnected to develop a software that can pinpoint the exact combination of linear frequencies that combined to determine individual awareness. This software is capable of revealing every part of an individual's awareness. From sexual and gender preference to how that individual awareness will process and share information. Literally, this technology can accurately determine all awareness's advantages and disadvantages in order to create a customized road map that will empower us to individually optimize and collectively harmonize.

In this next section I will disclose the core mathematics that enabled Health Reconnected to create this software. This software will make this collective transformation not only possible, but comprehensible. Think of this technology as a gift that if accepted, will help you synchronize your thoughts with the frequency of pure light. If you are able to fully synchronize your thoughts with the light before you die, your awareness will be freed from the shackles of darkness and allowed to experience a future existence in heavenly light.

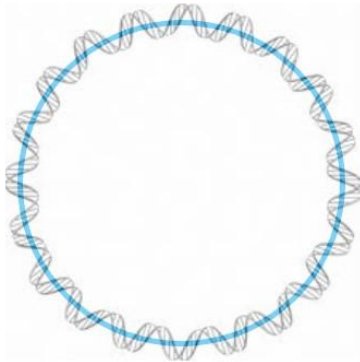

This illustration was designed to help you conceptualize the mental transformation from darkness to light. The blue circle I was shown in my vision represents the whole-based heavenly awareness of pure light. The fluctuating helical frequency that coils around that blue circle represents the serpent-like sine wave that expands our self-based awareness through the infinite shades of darkness. This fluctuating darkness functions to educate your physical awareness by allowing you to experience the emotional consequences of self-based choice. These firsthand consequences expand our awareness and help illuminate the darkness that led to our suffering. Ultimately, it's our individual and collective suffering that leads us to the light.

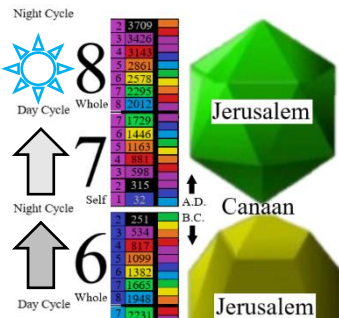

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

Symbolically, the circle represents the existence of eternal life, and the fluctuating helical serpent represents the existence of eternal death. The only way to transcend the repetitive cycle of death is to purify your thought. If you can successfully align your thought with pure light (equality) at your physical death your awareness will be freed from the eternal cycle of darkness (death) and allowed to reconnect with the eternal cycle of light (life).

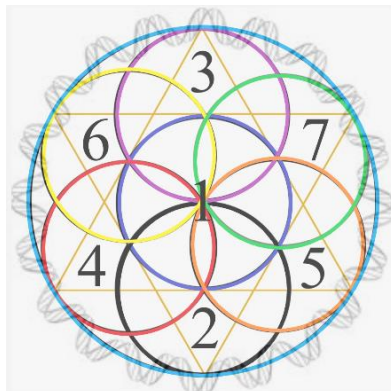

This clearly indicates that your past choices have no bearing on your present ability to achieve a future eternal existence in pure light. This indicates that every person still alive in this moment has full disclosure of the requirements to make this conscious transition in thought. Simplistically, we have two choices to consider. One choice is the infinite shades of dark (self-based thought) which leads to eternal death. The other choice is pure light (whole-based thought) which leads to eternal life. This simple illustration allows you to conceptualize the absolute power of your present choice, as it will determine which eternal cycle your awareness will be assigned to in your next existence.

This illustration will also allow us to discuss the apocalyptic narrative in the New Testament that predicts the final prophet with the father's perspective will return to defeat the dragon and the collective beast it empowers. The Book of Revelations specifically states that a powerful dragon stands by the shore of the sea. Metaphorically, the shore of that sea is created by the blue whole-based circle and the dragon is the helical serpent that coils around that metaphorical shore. Symbolically, the dragon represents our fears of the unknown (darkness), and the beast it empowers represents the chaos our collective fears of the unknown create.

This apocalyptic narrative was created to describe the expansion of our knowledge and technology in the 7th cycle of time. The seven-headed beast that emerges from the sea is an analogy that describes the seven incremental expansions within the 7th cycle of awareness. The metaphorical dragon that stands by the shore uses our fear of the unknown to inspire powerful self-based knowledge and technology. As our self-based knowledge and technological capacity strengthens, so does the destructive power of the metaphorical beast our fears inadvertently created.

In this combined illustration, the seven heads (circles) that combine to create the collective beast have been numbered. This helps you visualize how this beast's heads would systematically emerge out of the sea during the 7th cycle of expansion. The reference to the mark of the beast specifically relates to the black circle that represents the fears that lead to conflict and war. Anyone who is guided by fear and chooses fighting instead of cooperating is metaphorically marked by the beast of war (fear). To overcome the collective beast, you must overcome your self-

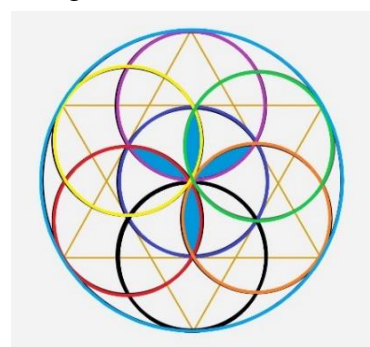

Part 2: How the micro-macro rotational patterns organize the expansion of linear time.

based fears of the unknown. When you overcome your fears of the unknown, you become part of the conscious effort that defeats the beast. The final prophet is credited with defeating the beast, as this prophet fully disclosed the mathematics that illuminate the unknown. I have already shared the mathematical framework of the space-time continuum and will now discuss how every individual perception within the continuum is created. Knowing and sharing these mathematical truths will create the double-edged sword that will defeat the beast the dragon empowered.

If you can overcome your fears before you die, the metaphorical dragon that rules the first seven cycles of darkness will allow your awareness to ascend into the 8th cycle of pure light. In this way, think of the dragon not as the enemy, but as a divine protector. Do not misinterpret this. I am not suggesting that the dragon of darkness should be worshiped but instead, should be respected—as this metaphorical dragon is designed to expand our awareness as it protects the light.

This metaphorical dragon expands our awareness by teaching us within the seven realms of darkness it controls. In these realms of darkness, the dragon teaches us the tragedy of inequality, which always leads to suffering and death. To effectively protect the light and expand our awareness this dragon connects and organizes every physical experience so that in the end of our collective expansion, we will all be capable of understanding how the darkness ultimately leads us into the light.

This narrative that describes the dragon was created to help you understand the geometric function of the dodecahedron. This platonic shape specifically represents the authority of the platonic father who functions to protect our platonic mother. I suspect that our platonic father is described as a dragon for two very specific reasons. The first is the geometric configuration that is created by the Star of Life when fear (represented by the black circle) is overcome. See that the head, wings, and body of the symbolic dragon is created by the combination of the yellow, green, magenta, red, and orange circles.

the father's platonic influence is associated with the transformative element of fire. The platonic father protects our platonic mother by illuminating the darkness that fosters our individual and collective fears. Every individual that allows the dragon (platonic father) to fully illuminate their fears will feel compelled to serve and protect the light/fire that transformed their awareness. Every individual that consciously chooses to serve the light (truth and equality) will metaphorically become symbolic members of the dragon force that illuminates the darkness (deception and inequality).

Being a symbolic member of the dragon force does not imply that you worship the dragon, instead it expresses your conscious positive commitment to overcome your fears so that you can help re-establish the peace and prosperity the dragon (our spiritual father) is designed to protect. I specifically chose to highlight the symbolism of the dragon, as we will now discuss the ancient temple of Kukulcan. This ancient temple was built to honor the dragon that governs the 7 cycles of darkness and is associated with the Mayan civilization that predicted the December 21, 2012, end of collective darkness date. This date was synchronized with the transformative vision I had of the whole-based blue circle of eternal life which represents pure light.
