AT THE ANNUAL FLCA PASSIVE MEMBERS MEETING / AUGUST 18, 2012

VOLCANO

by Billy Eduard Albert Meier [written at age 27]
12th July 1964, Mehraulii, India

Translation: Philip McAiney

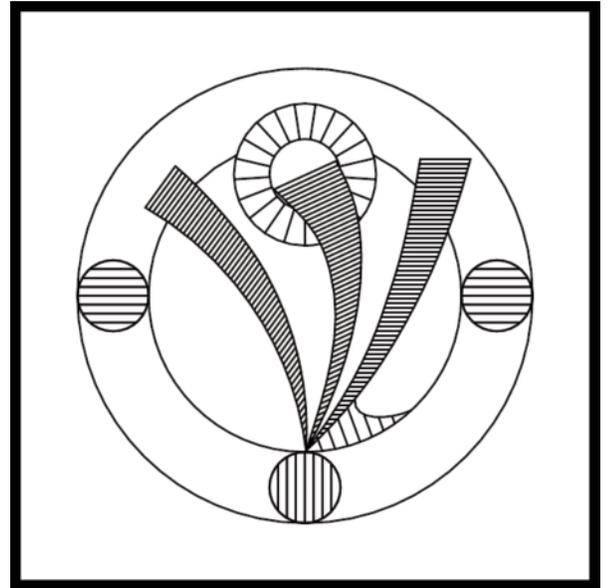

Correction: Christian Frehner, Catherine Mossman

With a primeval deep rumbling it pulls me out of sleep. It begins to live, to breathe. The earth trembles and the mango tree to which my hammock is attached, becomes uprooted and suddenly flips in slow motion on its side. I quickly jump from the mat and in a mad rush bring myself to safety – when simultaneously the tree cracks, thunders to the ground and shatters. My hammock is lost, but I have saved my life. Briefly I think of the coming nights without a hammock, a vital thing in the jungle. It provides some safety in the jungle from snakes and other wild animals! But now it is destroyed, and for some time I can get no other hammock, for I am in the midst of the Indian jungle, and the next settlement is more than 120 miles away. I am completely alone and my only friend is my .38 Smith & Wesson revolver, together with a dagger and a bayonet. But I will have to see how to master the situation, as I have come this far and am very determined to continue and still find my way.

For now, the earth still trembles, and deep below the ground is a heavy rumbling. Earthquakes: heavy and deep in the midst of a wild jungle. It can become dammed hot and dangerous because if the rumbling doesn't stop soon then the animals become even wilder than they normally are. A continuing earthquake makes them crazy. Already they are howling, roaring, screaming and whistling in the highest tones of fear, and driven by panic-fright they chase and rush over the shaking ground and through the hot air. But the rumbling and rolling keeps going on – it becomes louder and more threatening than it was before. From minute to minute,

Symbol: FREEDOM

from “Symbols of the Spiritual Teaching”
from the storage banks of Nokodemion and
Henok retrieved and recorded by
“Billy” Eduard Albert Meier

FREEDOM is one of 601 symbols in the book “Symbols of the Spiritual Teaching”.
In total there are 52,476,812 symbols.

the dull sound increases more and more to a howling. Not far away from me in the jungle I can see through the dense plants that the air begins to shimmer and a dangerous hum sound suddenly can be heard. Damn it, this was all I needed. Only a short time until the earth opens. It will rip and tear like brittle leather, and then hell will break loose. Red-hot lava will shoot out from the earth and will turn the jungle really into a hell. A volcano erupts – it has started to live only a few minutes ago, with a deep, threatening rumble, deep under the earth.

Rooted to the spot, I stand there and look into the shimmering hot air between the trees. What else could I do? All around, the abundance of the jungle grows rampant, and it prevents me from simply running away. I would not get far, in any event, when the approaching volcano would take my life. So I might as well remain standing on the spot and wait for things to unfold. If I must exchange my life with Nirvana, then I can do it here and don't have to struggle just a few metres through the jungle before my destiny reaches me. So I stand and stare at the trees, liana vines and other jungle plants.

THE SPIRITUAL TEACHING APPLIED IN OUR DAILY LIFE

A meditation exercise to feel more rested

Several times a day a 3-minute meditation:

- Observing your breath (in/out)
- Imagine a flower (rose, orchid)
- Imagine something that is flowing, a brook or stream of water, etc.

source: FIGU Discussion Board/Billy Eduard Albert Meier

FIGU FACTS

In 800 years we can expect the first real reward from our mission because then the spiritual teaching will really spread on Earth and will free the people from the fangs of religion and belief. However, the prerequisite is that everything develops into the right direction. The publication of the book "**Kelch der Wahrheit**" will be one of the main factors for the spreading of the truth.

VOLCANO from page 1

Seconds tick by on my watch, becoming minutes, and eternities. The damned tic-toc-tic-toc of my watch appears to sound very loud in my ears, something that never happened before unless I had held the watch against my ear.

There is nothing I can do but stare at the glowing fire. Like in a cinema, I stare at the same place and only a small difference separates me from the show and the spot where I am standing; in the show I see everything, completely safe, on the screen, whereas here I face the harsh reality, and instead of the screen, I'm staring at the lethal spot where hell will break loose in a few minutes. But hell comes quicker than I expected! Crashing and screaming painfully, the earth is torn apart and plunges into the depths, dragging along trees, plants and animals. In a thundering explosion they are being transformed into atoms a few metres below the ground as they fall onto the high-swalling and bubbling lava. Heavy, thick and white smoke of the atomized plants spews from the bursting ground, followed by a pitch-black smoke plume. Now reddish-yellow glowing chunks are spurting out – lava. With primeval force, a tremendous explosion is hurling glowing lava into the air that is filled with thunder. Some eighty metres high it hisses and draws a fiery tail behind it, like a big shooting star. As the chunks and lumps of lava have reached the summit of their catapult flight, they whir back to earth, thunderously crashing through the jungle's huge trees, splitting them into a thousand pieces and setting the jungle on fire. The small volcano is born – and it lives. A mere 130 metres away I stand in front of the raging hell. Suddenly the air is diabolically hot, and unspeakable thirst begins to torment me. I often have to jump to the side when a piece of lava is sailing along, and only with great efforts can I escape the many glowing chunks of rock that come thundering down. They spray in a small explosion when they crash to the ground, and then set everything on fire around them. I am already standing in a sea of flames, when a last tremendously loud explosion shakes the ground, and then suddenly total silence prevails, which in the next moment becomes replaced by a roaring downpour and a bursting thunder. Then suddenly no sound can be heard, and all the small and large fires have gone out. Only the extinct fire spots and the smoke curling into the sky are witnesses to the events which have rolled through the jungle only a few minutes ago. The heat is suddenly gone, and only the normal oppressive temperature of the jungle lies between the half-burned or at least singed trees and plants.

What has happened? Over the fiery hot and steaming ground I walk slowly towards the crater, while here and there avoiding a faintly glowing chunk of lava lodged in the midst of completely burnt plants. About 40 metres before the crater I stand as though turned to stone. A huge tiger lies on the ground and – in spite of what has happened – seems to sleep calmly, while directly behind it an enormous piece of lava glows. But no – what's that? The lava covers a third of the tiger's back part, and its hair is mostly burned or singed. The tiger must have been sleeping, undisturbed by the rumbling and thunder of the erupting volcano, and during sleep it was hit by the lava falling down and instantly killed.

Proceeding, I meet other dead animals: Snakes, monkeys and much more that could not flee the raging elements bursting from one second to the other. Now I am standing at the crater. In fact, I have spent more than an hour to get the 130 metres from my resting-place to this area. 130 metres of jungle and partly glowing lava that now cools down by the gradually-falling heavy rain. It is tremendously hot here at the crater or what is still left of it. Just over a metre in diameter and around 4 metres in length, but certainly about 20 metres deep: now it is closed down there, and water is bubbling and simmering. And now I understand why the volcano so suddenly exhaled its breath and why all the fires were extinguished. The lava has eaten away and melted the eruption channel until it broke through the walls of an underground lake and the watery mass thunderously plunged into the glowing lava. This in turn led to a thunderous explosion that destroyed all the oxygen on the ground surface in a great area for a few seconds, immediately extinguishing all fires. Now I could also explain to myself why I could breathe no more air for a few seconds and why I was seized by a terrible deadly feeling of suffocating, so I had to gasp for breath.

The events appear strange to me, for I know of no volcanic activity in this area, consequently I also cannot explain the peculiarity of this small outburst. To me, the whole thing appears like a small volcano that erupted and did its ways just to let me experience a little adventure. Now I take out my camera and snap a few pictures as a reminder of the hours, where I was standing with one foot already in Nirvana. Then I go back to my resting-place and gather the rest of my belongings that are not destroyed and burned by falling-down lava chunks. From half-burnt branches and leaves I make a make-shift camp for the night and lay down for some rest; for the sun is already sinking down, and soon it will be night. And tomorrow I have to be rested because I want to solve the mystery that has lured me to this location.

Days later, back at the Ashoka Ashram in Mahrauli, I learn from Miss Rogers and Monk Dharmawara, that exactly at the time I had the experience in the jungle, a strong earthquake had occurred.

CHRISTIAN FREHNER'S VISIT IN ONTARIO AND TORONTO / AUGUST 17-25, 2012

by Catherine Mossman

CHRISTIAN AND MICHAEL AT WASAGA BEACH ON GEORGIAN BAY

We had a great time having Christian Frehner, from the Core Group of Switzerland, with us for nine days in August, from the 16th to the 25th. We had planned it so his stay corresponded with our annual Canadian FIGU Passive members meeting that we hold in August. This meeting was held at the beautiful country retreat, northwest of Toronto, belonging to one of our members. We all had ample opportunity to ask questions and talk with him.

This having been his first time in Canada he had a great introduction to the beauty of the Ontario countryside, and then later the bustle of Toronto.

At our idyllic country retreat we all made various presentations, enjoyed sumptuous repasts and were treated to a presentation from Christian on the subjects of Love, Peace, Freedom and Harmony. We've made this available to everyone on our new FIGU Canada YouTube Channel:

<http://www.youtube.com/watch?v=xBok1xZb4HY>

We also enjoyed a Q&A session with him after that, which we've also posted for your interest:

<http://www.youtube.com/user/FIGUCANADA>

After that weekend, Christian had a few days where he visited with a couple of our other members who also live north of Toronto. We took him to the largest fresh water beach in the world, Wasaga Beach (nestled in Georgian Bay which is a part of one of the Great Lakes, Lake Huron). We took him cycling through one of our provincial parks, also on Georgian Bay, called Awenda Provincial Park. The water was shallow enough that he actually enjoyed cycling IN Georgian Bay as well.

The two-hour drive down to Toronto, along Highway 400 allowed Christian to experience the slow transition from the peace and quiet of the north to the building ebb and thrum of the big smoke. We pointed out the spaceship shaped theatre complex that can be seen on the way down too! Very thrilling, we're sure!

On the same day that we brought him down to the city we gave him a bit of a drive around some of the various neighbourhoods that exhibit the vibrant mix of cultures that this city has on offer. From Little India, to China town, to Little Italy and the marvelous city skyline, approached along the Gardiner from the East, he saw it all and then some, all in one afternoon (and though he didn't say it I'm sure he was well pleased to be out of the car at last when we dropped him off at his new in town abode).

Luckily, we found for him a great B&B right down at Harbourfront, on the shores of one of Ontario's other Great Lakes, Lake Ontario. There he had a combination view of the Toronto Islands as well as the towers of the nation's financial centre. He had some time to himself, finally!

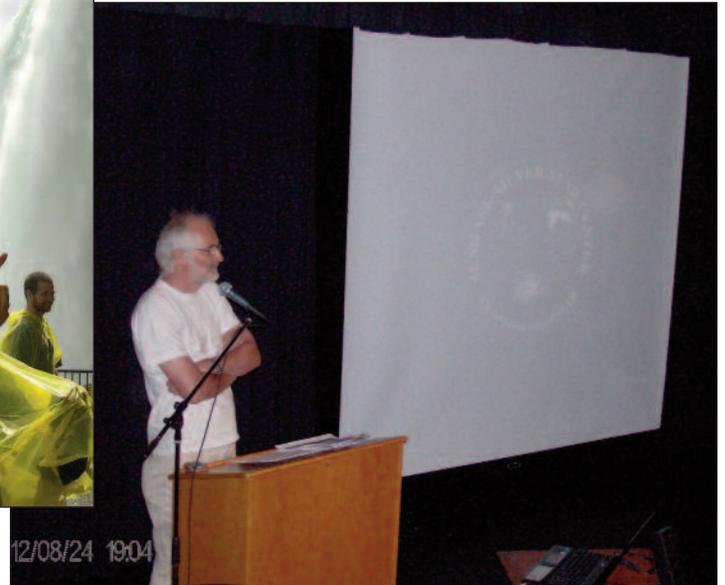

ENJOYING NIAGARA FALLS WITH JUAN AND HODARI

The next day we whisked him off to tour Niagara Falls and have lunch in the beautiful wine-growing region of the Niagara Peninsula. While there Hodari Clarke was able to record an interview with Christian, this too is available on our YouTube site:

<http://www.youtube.com/watch?v=hhi-xUZEWo0&feature=related>

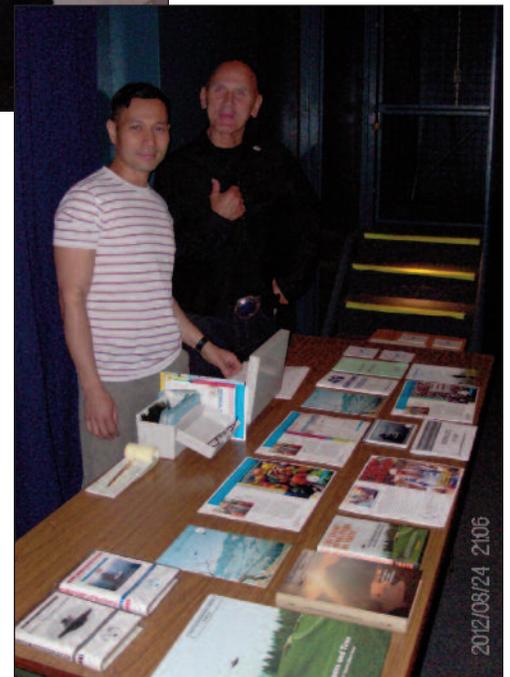

The following day was the day before Christian's Toronto presentation. As we had people coming from great distances we decided to make Christian available to meet with them the night before and over the next couple of days. They were coming from a long way: from across Canada and from some of our neighbouring northern US states of Ohio, New York and New Jersey, as well as from as far away as California. For those who cannot get over to Switzerland this was an excellent opportunity to meet with one of the Core Group members and make it more worth their while, considering the expense involved. At this informal meet-up, held in a library conference room, introductions were made and all kinds of questions were asked and discussions were had. When our time was up there we then walked over to one of the local restaurants and continued to chat and get to know some of our new FIGU friends from far afield. This was great for everyone, especially those who have no contact at all in their hometowns with other people who they can discuss the important subject matter that FIGU does. One can feel awfully alone when this is the case. The following day, August 24th, was the day of Christian's presentation that we, FIGU Canada Landesgruppe, were hosting at a theatre in one of our local libraries. We ended up having a very good turn

CHRISTIAN INTRODUCES HIMSELF DURING HIS PRESENTATION / AUG. 24, 2012

POST-LECTURE DINNER IN THE ANNEX DISTRICT

FAREWELL BRUNCH AT QUEEN'S QUAY WATERFRONT

out. Much better than expected and were glad that our hard work brought people out. Christian began with a background and introductory presentation on the Meier case including footage of himself and Billy visiting one of the sites, now 20 or so years old, of one of his previous Beamship sightings and recordings. The second half of the presentation was a reading of, the as yet at that time, unpublished work of Billy's entitled: What all Human Beings of Earth Should Know !. This is also now available on our site:

Please scroll to Bulletin 78 "What all Human Beings of Earth Should Know !" <http://ca.figu.org/figu-bulletins.html>

After the meeting we all went to a nearby restaurant to continue with getting to know each other and continuing to talk to and ask questions of Christian. And finally, on the next morning, Christian's final day in Canada, we had one more opportunity to spend time with Christian; we'd arranged a brunch meet-up at a restaurant overlooking the water. It was great to meet our fellow FIGU friends from far and wide, to put faces to names and to simply spend time together. We deemed the weekend, indeed the whole nine days, a great success. Thank you Christian for agreeing to make the trip across the pond and to make yourself available for our endless barrage of questions!!

HAVING FUN AT KENSINGTON MARKET

OVERPOPULATION: AS SEEN FROM A LOGICAL PERSPECTIVE

by Michael Uyttebroek

Throughout numerous booklets, brochures and flyers, FIGU and Billy Eduard Albert Meier have clearly stated their position with regards to overpopulation. Despite many attempts to address this seemingly insurmountable issue and subsequently, all other problems associated with this matter, it appears as though there are only very few who are truly interested in tackling our woes at their root source.

It would not be surprising if the following comments would be prevalent amongst the affluent of our western developed nations, such opinions as: “we have enough food to feed everyone, we just need to change our diet”, or “having more people is good for the economy, after all, who is going to pay for our retirement”, etc. Finally, there are probably those that believe that “there is no global warming, this is a natural phenomenon that occurs cyclically”! To be sure, there are many more limited perspectives that don’t acknowledge the impact our overpopulation is having on our environment while others think that having more and more children is a positive thing, however, the fact is, that this planet, along with all its natural resources including the flora and fauna, is finite. It doesn’t take a mathematical genius to see that if we continue, unabated, on our current trajectory of population growth, all problems will increase insurmountably. More people, less space, less food, less forest, less oil, less fresh water, less arable land, depleted ocean fish stocks, etc. Along with this there will be increased desperation, brutality, violence, struggle for survival, wars, lack of caring for life, etc. Itemizing lists of all of the possible effects on nature and humankind could easily be greatly elaborated upon, but in spite of all our current and future problems, it is imperative that we make the effort to **think globally and not selfishly**.

Rather than thoughtlessly and irresponsibly supporting the motto: “go forth and multiply”, we need to be conscious of the impact that we all have on this finite planet. This does not mean not having children at all, but it simply means that if a couple chooses to have a child, many clear-cut, unambiguous prerequisites must be in place in order to foster a healthy and balanced upbringing of that child, ensuring that he or she has all of the necessary resources, love, education and possibilities to have a healthy and fulfilling life. Again, FIGU has written quite extensively on this topic.[1]

The key is that we must understand the severity of the problem of overpopulation if we are to adequately come to terms with it. It is very easy to turn our backs on the situation and say that “oh, it doesn’t matter to me, I have enough, it doesn’t affect me”. Or, “what difference is it going to make whether or not we pollute the earth, water and air, soon I’ll be gone and it won’t matter”. Other equally egotistical opinions are: “you only live once, so take what you can and live it up”, or “I have what I need, too bad for the others”. And these are common opinions that would most probably surface when presented with this topic. Still, the majority are so completely caught up in their own fantasies, desires, struggles and sufferings that they haven’t given the population crisis a moment’s attention. Again, we need to look outside of our sphere of self-absorption and recognise that we are all interconnected. Droughts, energy shortages, desertification, global warming, increased CO2 levels, pollution etc. see no boundaries. What affects the poor also affects the rich. **Quality of life decreases as population increases**...again, we must view this problem from a global perspective. The current time urges us to act in a logical and decisive manner by taking the first steps to educate and inform anyone willing to listen, so that gradually we can change our world into a better place to live, where peace, love, freedom, respect and happiness make their way into the consciousness of each and everyone; where there is abundance and balance, logic and justice for all; truly, a paradise on Earth. But in order to begin to get the ball rolling in the right direction, we need to have the courage to look at and consider the reality of our precarious situation and discuss and write about it so that more people can finally become aware of this tragedy.

In researching the various global problems facing us as well as future generations, it becomes evident that the more intensively one looks at the individual problems, the more complex, varied, interwoven and detailed they become, spiralling into further complexities. It is easy to see how the experts and layperson alike can get caught up in the details and in trying to find the individual solutions while, at the same time, not seeing the underlying causes from a fundamental, logical basis. Although the various individual problems are, albeit, acutely serious and need to be solved, unless the bigger picture, the root cause: overpopulation, is dealt with, solving all the spiralling out of control secondary problems will simply be a ‘constantly trying to catch up’ solution with no real permanent answer. Much like the mythical Hydra, one head gets chopped off and three new ones appear. This is exactly the case with our current modus operandi. Instead, we need to be able to address the most critical issues **accompanied** with an effective long-term plan which is: curtailing our burgeoning population explosion back down to a sustainable level of 529 million[2] people as recommended by FIGU. Therefore the appropriate efforts and resources need to be targeted to not only meet the immediate growing needs of humanity but additionally, it is imperative that there is a world wide goal of reducing the growth of our population. The latter of which needs to be accepted and enforced by all governments and peoples alike, otherwise, all further attempts to solve our problems will be useless, for, as the problems increase in step with our population growth, an overall effective solution will simply slip through our fingers and become completely unfathomable.

Although there are many agencies that contend themselves with trying to solve the various global problems, for example the **Food and Agriculture Organisation (UN) or the World Food Summit or more recently, the Earth Summit in Rio**, the experts never directly tackle the overpopulation problem as being the root cause of all the other problems.

OVERPOPULATION from page 6

Here are some of the various perspectives offered by the leading organisations:

How to Feed the World in 2050 – High Level Expert Forum

Oct. 12 - 13, 2009 (FAO)^[3]

The problems to be resolved

- Will we be able to produce enough food at affordable prices or will rising food prices drive more of the world's population into poverty and hunger?
- How much spare capacity in terms of land and water do we have to feed the world in 2050?
- What are the new technologies that can help us use scarce resources more efficiently, increase and stabilize crop and livestock yields?
- Are we investing enough in research and development for breakthroughs to be available in time?
- Will new technologies be available to the people who will need them most - the poor?
- How much do we need to invest in order to help agriculture adapt to climate change, and how much can agriculture contribute to mitigating extreme weather events?

On September 14, 2010, in Rome^[4], **the FAO (U.N. Food and Agricultural Organization) and the United Nations World Food Programme (WFP)** stated the following on their site:

- "Vigorous and urgent action by nations and the world has been effective in helping to halt galloping hunger numbers," said WFP Executive Director, Josette Sheeran. "But this is no time to relax. We must keep hunger on the run to ensure stability and to protect lives and dignity."
- Last May, Jacque Diouf, (the now former director-general of the U.N. Food and Agricultural Organization) also launched a "**1 billionhungry campaign**" aimed at inciting world leaders into taking firm and urgent action to end hunger. More than half a million people have already signed an online petition calling on politicians to make hunger reduction their top priority and a million are expected by the end of this year.

The 1996 World Food Summit^[5] stated the following as their target:

- World leaders attending the World Food Summit in Rome committed to cutting by half the **number** of undernourished people in the world by no later than 2015. The World Food Summit target is thus to reduce the number of hungry to around 425 million by 2015.

Finally, the **Earth Summit in Rio de Janeiro, Brazil June 20 – 22, 2012**^[6] has on their website the following 7 critical problems prominently featured: **Disasters, Oceans, Water, Food, Cities, Energy, Jobs**

Unbelievably, there was absolutely nothing on the Earth Summit timetable of events and themes^[7] pertaining to addressing the extremely urgent matter of overpopulation...

It seems that a serious discussion on how to solve our food shortages, climate change, poverty, etc., by all the major organisations, completely omits the need to tackle overpopulation as the **first and foremost factor**. Instead, the focus is on how to deal with the repercussions of our growth, while at the same time, utilising faulty^[8] and overly optimistic population growth forecasts (9.1 billion by 2050)^[9].

According to the Plejarens, **as of December 31, 2011 (midnight), we had already reached a population of 8,199,430,908!** In an attempt to find solutions it is clear that there is no overall guiding plan of action pertaining to the main and primary problem of overpopulation. Here the expression "the left hand doesn't know what the right is doing", bears validity. **The various departments do their research in a fragmented manner with no viable unified goal.** Again, what is needed is a two-fold solution that not only tries to bring immediate relief to the acute problems at hand while at the same time, **primarily** focussing energy and resources on birth rate reduction programs and responsible parenting.^[10] Desperate times require drastic solutions. Billy states in Contact Report 434 from Sept. 9, 2006... "Thus, a human catastrophe is already predetermined, which can only be stopped in its worst forms by a rigorous birth control, respectively by a worldwide birth stop, controlled step-by-step in a certain way over a long period of time."

In solving our immediate and future problems we should never lose sight of tackling our population growth, for it holds the key, as the **decisive factor**, in ultimately solving all sub-problems.

FIGU-LANDESGRUPPE CANADA MEMBER PROFILE

MARCEL GORBANESCU

**How did you come across the "Billy" Meier material?**

In the summer of 2006, I asked myself if there was extra-terrestrial life in the Universe. While I was browsing the Internet, I made a search using Google to find information about real encounters with extraterrestrials on planet Earth.

From what I knew previously, the Internet was abundant with all kinds of stories about alien encounters, most of them being unreal or created by people for material gain.

In that summer of 2006, what attracted my attention was the encounter "Billy" Meier had on the night of November 26th 1977 with Asina, the aquatic extra-terrestrial being who was half human, half fish, whom visited him at the Semjase Silver Star Center, in search for help because her spaceship had broken down while in Earth's space. Asina is a woman from a planet in Deneb in the constellation of Cygnus. On November 26th of 1977, her peoples' spaceship became damaged while traveling near Earth. She contacted "Billy" telepathically who then contacted the Plejaren who sent help. After a few years in September 26th of 2000, she came back to Earth to thank Billy for his help and Billy met her personally for the first time. She is unlike other human ETs. Her race's physiology is different whereby her race has long fingers, soft skin and an appearance similar to a mixture of human, fish and amphibian.

I found that encounter of "Billy" Meier with Asina the ET, half human and amphibian, over the Internet in a UFO website which attracted my attention, and something in my consciousness told me that this encounter was more real than the others that I had read before with human abductions by aliens and other nonsense stories about aliens or extra-terrestrials visiting planet Earth found over the Internet.

From that moment in 2006, I started to search for more information on Google about who "Billy" Meier was, and from there I found many websites like www.theyfly.com and www.figu.org and a previous website, gaiaguys.net, which doesn't exist anymore. These websites were filled with information about "Billy" Meier, contact notes with the Plejaren, contact notes about Earth's true ancient history for millennia, about the existence of human life in universe, and about the teaching of the spirit, the teaching of truth, and the teaching of life, which has been shared by the Plejaren with human kind on planet Earth.

What lead you to become a part of FIGU?

All this fascinating and amazing truth, knowledge and information about our Earth history, about the truth, reality of our past and present, shared with us by the Plejaren and their federation, brought me to search for more truth from the "Billy" Meier contact notes, and today decided to join the

FIGU-Landesgruppe Canada, after being a passive member with FIGU-Switzerland's Semjase Silver Star Center.

What do you hope to achieve with being a part of FIGU?

I hope every human being, with time will find like I did, the path to the true information and knowledge about the teaching of truth, the teaching of the spirit and the teaching of life by "Billy" Meier, and the Plejaren federation. Also, I hope to contribute to make the information about the true teaching of the spirit, the teaching of life, and the teaching of truth available for every human being interested in searching and discovering the true meaning of life, and the truth about Creation and its recommendations and natural laws.

So I would like to stand by the truth and support it whenever possible, and bring my contribution in any form, be it material, financial or spiritual.

Marcel Gorbanescu

THE HUMAN BEING AND DESTINY, YESTERDAY AND TODAY

by Billy Eduard Albert Meier

Translation: Catherine Mossman

1. The human being of yesterday went through life with clear senses, intellect and rationality as well as by his or her own initiative and clear consciousness.
2. He or she also knew that they had to find their way around in each life-circumstance by themselves and that specifically they must also lay claim to their own lives.
3. Antithetically to this, today's human being stands at a lost post, because not only does the clear mind and the life-essential intellect suffer from an immense deficit but so do the favourable prospects of finding his or her own way, as well as standing one's ground, in all life circumstances.
4. The majority of the younger generations are no longer capable to allow intellect and rationality to function self-sufficiently, to use each situation in order to make the best out of them, or to master life in a more purposeful manner.
5. With the present-day human being it is namely indeed the case, that they can barely, or not at all, manage their life situations and especially their lives themselves, therefore, in regards to life-conduct, they can barely exist or are even completely life-incapable without outside help.
6. With regards to real life-conduct, innumerable ones need help, regardless of whether this comes from intellect and reason possessing psychologists or from halfway intellect and reason-possessing human beings.
7. But already there begins another calamity, namely, that many times this help is not found, because life-experienced advisers are not to be found.
8. Psychologists and psychiatrists are visited for guidance many thousands of times to grant advice concerning life and life-development as well as regarding life-conduct etc., or, as to how psychic problems should be solved.
9. However, the whole thing is very questionable, because many psychologists and psychiatrists themselves are in need of help with their lives, as they themselves are also not clear with their life development and life-conduct, etc.; this is not ever taken into consideration or is simply consistently disputed and denied.

DER MENSCH UND DAS SCHICKSAL GESTERN UND HEUTE

von «Billy» Eduard Albert Meier

1. Der Mensch von gestern ist mit klaren Sinnen, mit Verstand und Vernunft sowie mit Eigeninitiative und mit klarem Bewusstsein durchs Leben gegangen.
2. Er wusste auch, dass er sich in jeder Lebenslage selbst zurechtzufinden hatte und dass er also sein Leben auch eigens behaupten musste.
3. Gegensätzlich dazu steht der Mensch von heute damit auf verlorenem Posten, denn nicht nur der klare Verstand und die lebensnotwendige Vernunft leiden an einem gewaltigen Mangel, sondern auch die guten Möglichkeiten des Sichzurechtfindens in allen Lebenslagen sowie das Behaupten des Lebens.
4. Das Gros der jüngeren Generationen ist nicht mehr fähig, selbständig Verstand und Vernunft walten zu lassen, jede Lebenslage derart zu nutzen, um daraus das Beste zu machen oder das Leben in zweckmässiger Weise zu meistern.
5. Bei den heutigen Menschen ist es nämlich tatsächlich so, dass sie ihre Lebenslagen und besonders ihr Leben kaum oder überhaupt nicht mehr selbst bewältigen können, folglich sie ohne fremde Hilfe zur Lebensführung kaum mehr existieren können oder gar völlig lebensunfähig sind.
6. Unzählige brauchen Hilfe, ganz egal, ob diese nun von noch verstandes- und vernunftbegabten Psychologen oder von halbwegs verstandes- und vernunftbegabten Menschen in bezug auf eine reelle Lebensführung kommt.
7. Doch da beginnt bereits ein weiteres Übel, nämlich dass diese Hilfe vielfach nicht gefunden wird, weil es dazu an lebenserfahrenen Ratgebern fehlt.
8. Zigtausendfach werden Psychologen und Psychiater aufgesucht, die in bezug auf das Leben und die Lebensgestaltung sowie hinsichtlich der Lebensführung usw. Rat erteilen oder psychische Probleme lösen sollen.
9. Dass aber dabei das Ganze äusserst fragwürdig ist, weil viele Psychologen und Psychiater selbst der Hilfe bedürfen und mit ihrem Leben sowie mit ihrer Lebensgestaltung und Lebensführung usw. selbst nicht klarkommen, das wird überhaupt nicht in Erwägung gezogen oder schlichtwegs einfach bestritten und geleugnet.
