

Silence is not golden.

Especially when it comes to your health.

If you're living with the excessive pain and bleeding of uterine fibroids, you're not alone. Fifty to eighty percent of women have them; someone you know has probably had to make some of the same choices you will.

At Englewood Hospital and Medical Center, we're committed to helping women make smart choices. We offer new alternatives to hysterectomy—such as uterine artery embolization, which shrinks fibroids without surgery, or laparoscopic myomectomy, which removes fibroids while still allowing you to have children. And whatever your treatment choice, Englewood also offers you the option of bloodless medicine — treatment without blood transfusions.

Don't keep it to yourself. Talk to the specialists at Englewood. Call our Fibroid Management Center at 201-894-3922, or go to our web site at www.engagewoodhospital.com to find the choice that's right for *you*.
