

# Vortex™

## Granular Systems, LLC

Efficiency and Precision in Granular Application

### Save Labor and Material Everyday!

All Vortex™ spreaders can be used year round for fertilizer, pre-emergent herbicide, insecticides, aquatic herbicides, ice melt products and other granular materials.

#### Vortex SPC™

**Ships in 2 boxes, simple assembly.**

The Vortex SPC™ air driven spreader is designed to ship in one carton and assemble in minutes. This lightweight, wide wheel base unit is maneuverable in small spaces and is powerful enough to handle large areas. Unit weight is approx. 70 lbs.

#### Skid Mount Models-

##### Vortex SPX™

**Ships fully assembled**

The Vortex SPX™ is fully assembled and shipped ready for use. This lightweight skid mount unit is powerful enough to handle large areas, and light enough for small boat mount applications. The Vortex SPX™ has the same operating components as the larger Vortex TR™, but with a smaller frame and material hopper. Holding capacity is up to 70 lbs. Use the Vortex SPX™ in a utility vehicle, pickup truck, pull cart, wagon or boat. A 12 Volt Vibration Kit is standard on the Vortex SPX™. Unit weight is approx. 90 lbs.

##### Vortex TR™

**Ships fully assembled**

The Vortex TR™ is a proven granular application system in the landscape, pest control, golf course and maintenance industry. The unit is configured to perform with the most difficult to apply materials. The Vortex TR™ is lightweight for use in utility vehicles, pickup trucks, boats and trailers. The unit has a capacity of up to 250 lbs. to eliminate going back for additional product, reducing down time. The Vortex TR™ spreader will eliminate most hand application of granular products and deliver material evenly and efficiently into ornamental plant beds, apply ice melt onto sidewalks, driveways and staircases, golf course bunker faces, blueberry and other row crops and waterways. A 12 Volt Vibration Kit is standard on the Vortex TR™. Unit weight is approx. 110 lbs.

##### Vortex ICE™

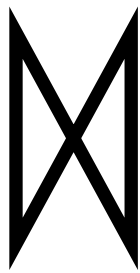

**Ships in 2 boxes, simple assembly.**

The Vortex ICE™ is especially designed to apply bagged ice melt material to sidewalks, stairs, porches, gutters and rooftops. The Vortex ICE™ is painted for high visibility and is engineered for operation in cold weather. Eliminating the labor of hand applying bagged ice melt, the Vortex ICE™ spreads material faster, more efficient and to more places than hand application. With the ability to propel material up to 30 feet, rooftops and gutters can have a complete coating of protection applied from the ground. Stairs are simple using the Vortex ICE™, throwing material from the top down, up to 40 feet and from the bottom up 30 feet. This application allows for major stairwells to be coated in seconds with one operator. Unit weight is approx. 70 lbs.
