

## Fire Preparedness Working Group Information Bulletin #2 September 2025

It has come to our attention that as people start to Fire Smart their properties someone or perhaps more than one person has taken their brush to the fire guard areas. We understand how this may be more expedient than using the brush pile at the Transfer Site but please don't just dump your brush in the middle of the cleared areas. If you must use the fire guard areas for your brush put it on top of the brush and dirt windrows that were made by the fire crews. Also do not include any building materials, garbage or metal of any type. The FPWG is hoping to convince the provincial authorities that we need a brush pile area outside of the Transfer Site. We are concerned that if they find people are using the fire guard areas for their own personal dumping sites they will not support our request. We are encouraged that people have started and are continuing to Fire Smart their own properties but please consider the impact you may have on the entire community when you are disposing of your materials.
