

Basic Principles of Architectural Louvers

Presented by All-Lite Architectural Products

Program:	Basic Principles of Architectural Louvers
Provider Number:	J746
Length:	1 Hours
Credits:	1 LU

Description:

A basic overview of the application and features of architectural louvers. Includes an outline of raw materials, louver components, the different styles and how they function, structural support and installation information. Includes information about hidden mullions and special shapes. A thorough view of the varied finishes offered and their benefits. Louver performance is discussed as well as the tests involved to determine free area, pressure drop, wind load, water penetration and wind-driven rain classifications.

Presentation:

This presentation is in a powerpoint format and is given by a facilitator. The target audience are architects, representatives, specifiers, owners and other professionals in the commercial market. All that is needed is a power source and a wall or screen. The instructor will supply the laptop and projector. Time is allotted for discussion and questions.
