

Floralg Water

Algal biological water

Hydrates, refreshes and soothes.

FLORALG WATER

INCI: Palmaria palmata extract - Pentylene Glycol

Organic - COSMOS/ECOCERT - China compliant - French origin - Use level: from 5 to 100%

Palmaria Palmata

Coming from Brittany (France), Palmaria palmata is reddish pink to deep reddish purple in colour and leathery in texture, with palmately divided fronds.

Organic

For the production of its active ingredients, ODYCEA favors a organic sourcing of algae. Palmaria Palmata is expressly certified as organic according to the European Standard Control Authority (EC Regulation No. 710/2009).

UpCycling

To preserve the quality of the seaweed before extraction takes place, ODYCEA does not rinsed the seaweeds with fresh water but only with seawater. Also, it performs a slow and progressive drying of the Palmaria Palmata while favoring the maximum wind. During the essential step, FLORALG borns.

An Active Algal Water

ODYCEA values FLORALG as co-product from the production of its marine active ingredients. It measures the soluble organic matter for each production lab.

FLORALG results in a soft and natural active solution beneficial for all skin types: mixed, oily, dry, mature or sensitive. It hydrates, refreshes and gently soothes.

It can also be used in cosmetic formulations to replace water and increase the natural and organic rates of the cosmetic formula.
