

D'ttach (DTHALL) Hitch instructions

Always try to mount the hitch assembly approximately 13 inches from the ground to the Center of the hitch tube. As pictured above on a Wright Intensity Mower.

You can achieve the proper height of installation by installing the carriage bolts through the hitch and hitch plate with the series of five vertical mounting holes, as seen above.

(DTHSM-KIT & DTHLG-KIT)

The same installation procedure applies when installing the DTHALL Hitch assembly on the small and large kit assemblies.
