

the Black and White

the SafeScience® Six

...steps to facilities protection and the people within

Hands, always start with the hands... NOT 15 second Purell alcohol, but our SafeScience 24 HOUR "Extended Protection" ("XP") using a "mechanical" molecule to protect as a "bioglove"

Clean, sure you can skip cleaning and just disinfect, but to keep a safe and comfortable facility clean up the hot spots with the SafeScience APC, All Purpose Cleaner & W-3 for windows

Disinfect and Deodorize Surfaces. SafeScience APD, All Purpose Disinfectant. No Wipe, No Rinse and No Corrosion on ALL surfaces. ASK about our new 7/30/90 day "XP" coating

Air Disinfecting and Deodorizing is misunderstood by architects and HVAC installers. Filters don't do-all. SafeScience IAQ disinfects and deodorizes - for all facilities - FDA Approved.

Insect Protection - eliminate and repel products, even for protecting outdoor practice and stadium areas. SafeScience has nontoxic products for both, and indoor solutions. Just Ask.

Labor Saving Equipment is the only way to protect large facilities. SafeScience steam & DePositron sprayers reduce your disinfecting time by 75%. ROI is often under two months.

We know it usually takes PAIN from MRSA, salmonella, norovirus, mold, odors or any other outbreak to review your maintenance program... why not call us and take proactive steps today?
