PESC is working to become the voice for the efficient and secure exchange of student data from initial access of the student from high school into the college environment through successful completion of the education experience.

PESC is driving the alignment of data across data systems, across sectors and is eliminating incompatible interfaces that present barriers to students and that inflate costs for states and institutions struggling to keep up with the demands of technology and real-time data exchange while maintaining competitive tuition rates.

PESC is building a core competency in XML architecture and data modeling and serves as a data standards-setting body for higher education.

PESC is collaborating throughout education and with the strength it derives from the actions and involvement of its membership; PESC is activating interoperability in higher education.

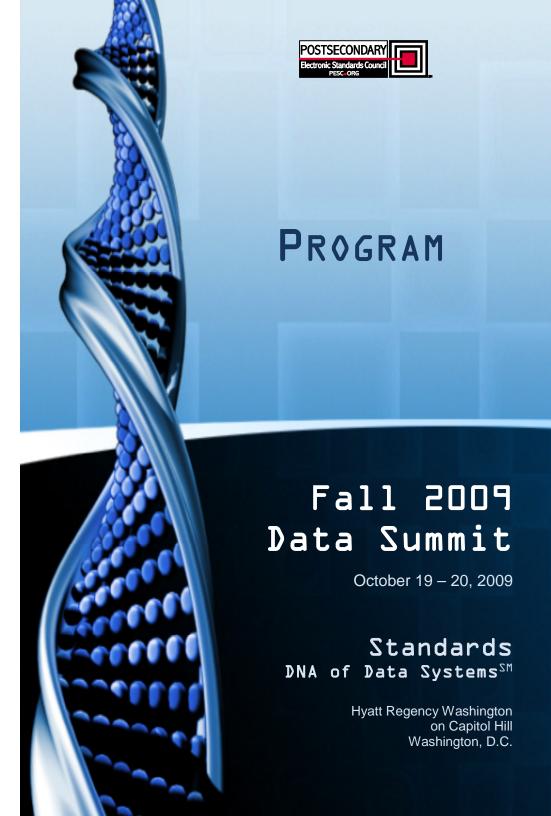

Established in 1997 & located in Washington, D.C.,
the Postsecondary Electronic Standards Council (PESC) is a 501(c)(3) non-profit,
community-based, umbrella association of colleges & universities;
professional & commercial organizations; data, software & service providers;
non-profit organizations & associations; and state & federal government agencies.

Through open and transparent community participation, PESC enables cost-effective connectivity between data systems to accelerate performance and service, to simplify data access and research, and to improve data quality along the higher education lifecycle.
